ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED UNDER THE UNEMPLOYMENT INSURANCE ACT - 1942.

This is the first annual statistical report on the operation of the benefit provisions of the Unemployment Insurance Act. The data were supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Office.

To provide a population reference for the data regarding benefit years established and benefits paid, the first three tables (Tables A, B and C) present breakdowns of the total insured population by industry, sex, age group and Province, and by occupation, sex and Province. These tables are identical in form with Tables 9 to 14 dealing with Industrial and Occupational classification of persons who established benefit years.

The term "insured population" is susceptible of a variety of interpretations, each of which is valid according to different points of view. Under the Unemployment Insurance Act, one of the factors determining the duration of the benefit to which a claimant is entitled is the number of days contributions made in respect of him in the five years immediately preceding the date of his claim. All persons who have contributed during the past five years and who are still living may, therefore, be considered potential claimants, and constitute one definition of the "insured population". Contributions have been payable under the Act only since July 1, 1941, so it is to be expected that with new entrants into and seasonal movements through the field of insurable employment, the total number of persons coming within the purview of the Act will increase up to July, 1946 even on the hypothesis of stable employment conditions.

Many persons who have contributed at some time but to whom a current book has not been issued will not, however, re-enter insurable employment and become what might be called "actively insured". Thus the most practical definition of "insured population" is - "Those persons to whom a current insurance book has been issued and who are employed or potentially employable". This would include those who are currently working in insurable employment and contributing, insured applicants for employment (including claimants), and those who have stopped contributing within the preceding few months but about whom nothing is known. Those who are permanently incapacitated, retired, or by any means removed indefinitely from the employment field, should be excluded. This might be called the "actively insured population".

Tables A, B and C, following, approximate the definition of the "actively insured population" which is subject to continuous change. These tables are the result of a registration of persons to whom insurance books were issued for the year 1942-43, between April 1, 1942 and August 31, 1942. In point of time this is the population from which the claimants represented in Tables 1 to 16 were drawn, since each claimant must have contributed for at least one hundred and eighty days prior to December 31, 1942. Thus, he must have been issued a book before June 1, 1942.

Benefit Years Established.

The following tables exhibit data respecting the 17,188 cases in which benefit years were established during 1942. Contributions first became payable on behalf of insured persons on July 1, 1941, but, since one hundred and eighty days contributions are necessary prior to the establishing of a benefit year, none could be set up until January 27, 1942. As a matter of fact, none was established until February, 1942, and during that month only about 800 were established.

The Unemployment Insurance Act provides that a benefit year is set up when an insured person, upon becoming unemployed and submitting a claim, proves that contributions have been made on his behalf for at least 180 days. This does not mean that the claimant is immediately eligible to benefit since other provisions of the Act determine his eligibility. For example, the Act specifies that the claimant must put in nine "waiting days", i.e., nine "working days" of unemployment before the first day of unemployment for which he can be paid benefit in any benefit year. In addition, the Act provides that only involuntary unemployment can be compensated, i.e., persons who voluntarily leave their employment without just cause, who are dismissed for misconduct, or whose unemployment is due to a labour dispute in which they are directly involved, are not eligible for benefit during these cases of unemployment. Persons in certain circumstances are excluded from benefit so long as these circumstances apply, i.e., a claimant must be capable of and available for work during his period of compensated unemployment, he must not have refused a suitable offer of employment, he must be sixteen years of age or over, he must not be an inmate of an institution maintained in whole or in part out of public funds, and in most cases he must be resident in Canada. The foregoing is not an exhaustive survey of the statutory regulations concerning eligibility for benefit, but is given merely by way of illustration.

The establishment of a benefit year merely means that the claimant's right to certain benefits within the succeeding twelve months has been determined. The duration of this benefit is determined by the duration of his contributions during the past five years and the duration of benefit drawn within the past three years. The amount of daily or weekly benefit payable depends upon his daily or weekly average contribution within the past two years and upon whether or not he has a dependent. (See Third Schedule of the Act.)

Once a benefit year has been set up and the duration and rate of the benefit that can be drawn within the following twelve months is determined, the claimant may draw upon these benefits in subsequent periods of unemployment at the determined rate and for a total number of days not exceeding the days authorized.

A benefit year may be terminated in a variety of ways, but there are three chief causes of termination that are covered in this and subsequent reports. These are: (1) Through exhaustion, i.e., the benefit year automatically terminates when the benefit rights to which the claimant has been declared entitled are used up; (2) through lapsing, i.e., twelve months after the date of the claim upon which the benefit year is based, it automatically lapses if the benefits have not been exhausted. (In the present report no benefit years have lapsed, since in no case had twelve months elapsed between the date of the claim and the end of the calendar year); (3) through the death of the claimant.

When a benefit year is terminated, the claimant may set up another benefit year if, becoming unemployed, he submits an initial claim and proves that contributions have been made on his behalf for at least sixty days since he last drew benefit in the benefit year immediately preceding. Thus, an individual may establish more than one benefit year during the calendar year. During 1942, as will be seen in Table 2, nine persons established two benefit years, the total benefit years set up being 17,188, and the number of persons involved being 17,179.

The following tables, numbered 1 to 16, set forth the data on benefit years established, some characteristics of the persons involved, benefit days authorized, benefit days paid and benefit years terminated.

Table 1 is a general statement showing the number of benefit days authorized and the benefit days paid during 1942, as well as the benefit days outstanding at the end of 1942. The total benefit days authorized to those who actually drew benefit during the year, is also noted. This provides information regarding the general adequacy of the benefit rights available to meet the unemployment encountered during the period. Since less than 25 per cent of the days authorized were used, and since, on the whole, less than 45 per cent of the days authorized to those who drew any benefit were used, the rights available would seem to have been more than adequate to meet the unemployment encountered during 1942. Since the employment situation during 1942 is known to have been good, this is not surprising.

Table 2 is also a general statement, setting forth, by provinces, the number of benefit years established, the number of days authorized and the persons involved, showing the number who set up more than one benefit year. This indicates to what extent those who exhaust one benefit year are able, by re-establishing their rights, to draw further benefit. The Act has been in force for so short a period, and unemployment has been so relatively light that few persons during 1942 found it necessary to set up more than one benefit year.

Table 3 classifies the persons who established benefit years, the persons who drew benefit, the benefit days paid and the amount of benefit paid, by sex and province. These data can be used to determine the average number of days paid and the average amount of benefit paid to those who established benefit years, and to those who actually drew benefit.

The amount of benefit paid, as presented in this table is not precisely the amount paid out of the Unemployment Insurance Fund during 1942. If, for example, a claimant did not prove that he had a dependent prior to the issuing of his first check but subsequently proved his right to the higher rate for those having dependents, the change in his rate would not be reflected here. Similarly, rebates of benefit or other adjustments due to payments in error, are not included. This is due to the manner in which these data must be collected. A punch card is set up for each benefit year that is established and such stable data as the name, sex, age, daily rate of benefit, days authorized, etc. are punched immediately. Then, when the benefit year is terminated, if this should happen during the year, or at the end of the calendar year in the case of those not terminated, the days paid and days remaining are punched. At the end of the calendar year these punch cards are sent to the Dominion Bureau of Statistics where the sorting and tabulating is undertaken. The figures for the amount of benefit paid are obtained in the Bureau by sorting the cards on the daily rate of benefit and obtaining for each daily rate a total of days paid. The total days paid to each sex in each Province is then multiplied by that daily rate and the sum of the amounts so obtained gives the total amount of benefit paid. It is highly improbable that the amount obtained by these means will agree exactly with the net amount actually paid out. But no other means exist at the present time for obtaining the amount of benefit paid by sex and Province.

Table 4 classifies the persons who established benefit years by sex and the number of benefit days paid according to whether or not he or she had a dependent at the time the benefit year was set up. If a person set up more than one benefit year the status at the time of the establishment of the first benefit year in the calendar year is recorded. It is felt that since a person's status with regard to dependents is subject to change from time to time, the above procedure yields as accurate material as could be obtained.

Tables 5 and 6 classify the persons who drew benefit and the benefit days paid by sex and Province according to the number of benefit days paid and the daily rate of benefit. Table 5 indicates the distribution of the persons who drew benefit with regard to the number of days paid and the number of days paid to the persons in each group. The distribution of males with reference to number of days benefit paid shows that the largest single group falls within the 1 - 4 day class, with the second and third largest groups falling within the 5 - 9 day and 10 - 14 day classes, respectively. The largest group of females falls within the 5 - 9 day class with the 35-39 day class second and the 1 - 4 day class third. Both sexes show a concentration of cases drawing relatively few days benefit, e.g., 50 per cent of the males and 39 per cent of the females who drew benefit, drew less than 15 days. At the same time 43 per cent of the males and 35 per cent of the females who set up benefit years drew no benefit and 71 per cent of the males and 60 per cent of the females who established benefit years

either drew no benefit or drew less than 15 days. The number of days benefit paid to each sex is concentrated mainly in the 35 - 39 day class. The duration of the benefit to which a person is entitled is calculated by subtracting from one-fifth of the days contributed during the past five years, one-third of the days benefit drawn during the past three years. Since 180 days contributions are necessary to establish a benefit year and at least 60 days contributions must be paid since benefit was last drawn before another benefit year can be established, the minimum for days authorized in any benefit year is 36. The concentration of days paid in the 35 - 39 day class can be largely attributed to those who established benefit years of the minimum duration and then exhausted their benefit rights.

Table 6 distributes the persons who drew benefit according to the daily rate of benefit. The daily rate of benefit can be calculated in any given case by multiplying the average daily contribution of the insured person during the two years immediately preceding the date of claim by 34 in the case of persons having no dependent, and by 40 in the case of persons having one or more dependents. According to the amount of his daily earnings an insured person contributes either 1.5, 2, 2.5, 3, 3.5, 4, 5 or 6 cents a day. During any two-year period the individual may contribute at a different rate from time to time, but many will contribute at the same rate during the entire period. Thus, the concentration of persons in the \$2.00 - \$2.09 rate consists mainly of those who contributed 5 cents a day throughout and who were paid at the dependency rate, as well as those who contributed 6 cents a day throughout and who were paid at the single rate. Those who were paid \$2.40 a day contributed throughout at 6 cents a day, and were paid at the dependency rate, and those who were paid from \$2.05 to \$2.39 contributed at 6 cents a day for part of the time and must have been paid at the dependency rate.

Whereas 63 per cent of the female beneficiaries were paid between \$1.00 and \$1.39 a day, 63 per cent of the male beneficiaries were paid \$1.90 to \$2.40 a day. This can be explained in part by the fact, as shown in Table 4, that the great majority of males were paid at the rate for persons having dependents while few females were paid for a dependent. In part, however, it must be due to the difference in earnings and the consequent difference in contribution rates.

Tables 7 and 8 classify the persons who established benefit years and the benefit days paid by the age, sex and province of the person setting up the benefit year. Although Table B shows that the age groups over 50 contain relatively few insured persons, they established proportionately more benefit years than did those in the younger age groups. Even more notable is the distribution of benefit days paid in Table 8, indicating that the duration of the unemployment suffered by persons over 50 was markedly longer than that of younger individuals.

Tables 9 to 12 set forth the industry, sex, age and province of the persons who set up benefit years, as well as the days paid to these persons. These tables parallel in form Tables B and C for the insured population.

Tables 13 and 14 classify the persons setting up benefit years and the benefit days paid to these persons, by occupation groups, sex and province. These tables parallel Table A for the insured population.

Tables 15 and 16 are concerned with the benefit years terminated during 1942. Of the total benefit years terminated (1,847) only 3 were terminated from causes other than the exhaustion of the benefit rights available, since sufficient time did not elapse between the setting up of the first benefit year in February, 1942 and the end of the calendar year to allow for the lapsing of rights. The three cases not covered in the table were caused by death in two instances and "other causes" in the third.

Table 15, which classifies the benefit years terminated by the age and sex of the beneficiaries as well as by the cause of termination, demonstrates the extent to which persons in the upper age brackets suffer from longer periods of unemployment than do the younger individuals. The largest number of benefit years terminated in any age group occurs in the group, "65 and over".

Table 16 distributes the benefit years terminated and the days paid according to daily rate of benefit. It will be noted that the distribution of persons here is, roughly, the same with respect to daily rate as that shown in Table 6 for all persons who drew benefit.

ANNUAL REPORT ON CURRENT BENEFIT YEARS UNDER THE UNEMPLOYMENT INSURANCE ACT - 1943.

The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices. Each of the nine Treasury Offices submits a daily report on benefit years established and, from these reports, a punch card is set up for each benefit year. At the end of every month the Treasury Offices also submit reports on benefit years terminated and, on the basis of these reports, cards representing terminated benefit years are completed. The cards not completed at the end of the calendar year (i. e. those representing benefit years current at that time) are then completed from a report supplying the "days paid" and "days remaining" as at December 31st, for each.

INSURED POPULATION

The population from which the persons who established benefit years in 1943 were drawn, would be, roughly, those who exchanged their insurance books at April 1st, 1943, plus those to whom books were issued during April and May of that year. This represents a minimum estimate of the "actively insured population" since some who had previously held a book might have sufficient contribution credits to establish a benefit year and some with partial credits from a past book might re-enter insurable employment after May 1943 and add sufficient contributions to become eligible for benefit before the end of the year. June 1st is taken as the significant date, however, since at least 180 days' (about 7 months) contributions must be paid before an insured person is entitled to establish a benefit year. The first three tables (Tables A, B and C.) of this report present data respecting the occupation and sex, by province; the industry and sex by age groups; and the industry and sex by province of the 1,997,700 persons who are known to have been issued insurance books in April 1943. By May 31st of that year, a total of 2,162,200 insurance books for the insurance year 1943-44 had been issued. Comparable data for the persons who established benefit years and the benefit days paid on those benefit years, during the calendar year 1943, are presented in Tables 9 to 14.

BENEFIT YEARS

Upon becoming unemployed an insured person may submit a claim for benefit and if it is proven that contributions have been made on his behalf for at least 180 days in the two years immediately preceding the date of his claim, a benefit year is established for him. This means that certain benefit rights (so many days at a certain rate) are due him and he may draw upon them (until they are exhausted) during this and subsequent periods of unemployment for the succeeding twelve months.

If the authorized benefit rights are exhausted within twelve months, the benefit year is terminated by exhaustion, but if, at the end of twelve months the authorized benefits are not used up, the benefit year automatically terminates (lapses). Upon the termination of one benefit year, the insured person can immediately establish another, provided it is proven that not less than 60 days' contributions have been paid in respect of him since the commencement of his last benefit year.

The establishment of benefit years and their termination is thus a continuous process and during any twelve-month period an individual may, theoretically, establish as many as three benefit years. For the purposes of the present statistical report, however, the calendar year is taken as the unit of time covered, so that some benefit years in existence at the beginning of the year and carried over from the preceding calendar year, as well as some established in the calendar year being surveyed and carried over into the next calendar year are included, in addition to those that were established and terminated during 1943.

Table 2 of this report indicates, for example, that during 1943 a total of 19,678 benefit years were established but, since 90 persons established two benefit years, the total of persons involved was only 19,588. At the same time, 33,558 persons had benefit rights available during 1943 (see Table 3) so that the benefit rights available in 1943 for 13,970 persons represented benefit years carried over from 1942.

The 19,588 persons who established benefit years comprise only 1.0% of those who might be considered potential claimants, as presented in Tables A, B and C. Unemployment Insurance contributions first became payable in Canada on July 1, 1941 and benefit payments commenced in February 1942. Relatively full employment has been maintained since that time to meet the expanding needs of Canadian and allied armed forces and civilian populations. The majority of the contributors to the Unemployment Insurance Fund have, therefore, contributed steadily and have not established benefit years.

The fact that a benefit year has been established does not mean that the insured person involved is entitled to benefit at that time - it merely means that the duration and rate of his benefit rights have been determined from the duration and rate of the contributions made in his behalf during the past five years, the duration of benefits drawn by him in the past three years and whether or not he has a dependent as defined by the Act.

Entitlement to benefit at any time is, of course, determined on the basis of the provisions of the Act as applied to the circumstances surrounding the particular case. Generally speaking, the provisions of the Act are such that cases of involuntary unemployment are compensated whereas cases of voluntary unemployment are not compensated. The circumstances surrounding a particular case may change during the period of unemployment and thus the decision regarding entitlement to benefit may be amended.

The general statement above concerning voluntary and involuntary unemployment is subject to some qualification, since certain provisions of the Act render some days of involuntary unemployment "non-compensable". For example, no compensation is paid for the first nine days of unemployment in each benefit year since these are set aside as a "waiting period". Similarly, days on which the claimant is incapacitated, such as sick days, are not compensated, since the claimant is considered not "capable of and available for work".

Some provisions of the Act defining voluntary and involuntary unemployment are the following : An insured person shall be disqualified from receiving benefit if he has neglected to avail himself of an opportunity of suitable employment; if he has lost his employment because of a stoppage of work due to a labour dispute in which he is directly interested; if he has been discharged from his employment because of his own misconduct; or if he voluntarily leaves his employment without just cause.

On the other hand, refusing an offer of work or neglecting an opportunity to work, does not constitute a cause for disqualification unless the employment involved is "suitable employment" as defined in the Act. In addition, an insured person is not disqualified if he has declined an offer of employment arising in consequence of a stoppage of work due to a labour dispute.

Certain personal circumstances must also be taken into consideration in determining eligibility for benefit. For example, an insured person is disqualified from receiving benefit while he is : under sixteen years of age, an inmate of any prison or institution wholly or partly supported out of public funds, etc.

The foregoing should not be construed as an exhaustive survey of the statutory regulations concerning eligibility for benefit. It is given merely by way of illustration.

Many of the insured persons who had benefit rights available in 1943 did not draw benefit. In some cases this was due to re-employment before benefit payment actually commenced, while in other cases it was a result of an opinion that the insured person was not entitled to receive benefit under existing circumstances because of certain provisions of the Act. Table 3 indicates that, of the 33,558 persons who had established benefit years that were currently in existence at some time during 1943, only 16,592 actually drew benefit during the year.

The Tables numbered 1 to 17, following, set forth data respecting the persons having benefit years current in 1943, benefit years established in 1943, some characteristics of the persons involved, benefit days authorized, benefit days paid and benefit years terminated in 1943.

Table 1 is a general statement showing the total number of benefit days available in 1943 and the number of benefit days paid. To complete the picture, the number of days that lapsed because of the lapsing of benefit rights that were not exhausted within twelve months of the establishment of the benefit year, is also included. This statement indicates that, although a total of 2,133,810 days were available in 1943 only 475,799 days (or 22.5%) were paid. Since employment conditions are known to have been good in 1943, it is not surprising to find that the benefit rights available were, on the whole, much more than sufficient to meet the need for them.

Table 2 is also a general statement classifying the total benefit years established in 1943, the benefit days authorized in those benefit years, and the number of benefit years established by the persons involved, by province. It will be seen that no one established three benefit years, and, of the 19,588 persons who established benefit years only 90 established two benefit years.

Table 3 classifies the 33,558 persons with benefit years current in 1943 (this includes those whose benefit years carried over from 1942), the persons who drew benefit in 1943, the benefit days paid to them and the amount of benefit paid, by sex and province.

The amount of benefit paid as presented in the Table is not precisely the amount paid out of the Unemployment Insurance Fund during the year. Adjustments due to the changing status of claimants, underpayments or overpayments made in error, etc., cannot be reflected here. This is so because of the method necessarily used to obtain the figures in Table 3. The punch card representing each benefit year contains the daily rate of benefit and the number of days paid. These are sorted by daily rate of benefit for each sex and province and the total of days paid at each daily rate is obtained. The amount of benefit paid by sex and province is then obtained by multiplying each daily rate by the number of days paid at that rate and obtaining the sum of the products for each sex and province.

Although the resulting amount is not exactly the amount paid out of the fund, it has two main advantages for statistical purposes. It is, strictly speaking, the comparable figure to the number of days paid and persons included as presented in Table 3 and the method outlined above is the only one currently available for obtaining the amount of benefit paid by sex and province.

Table 4 presents the number of persons with benefit years current in 1943 and the benefit days paid to them, classified according to whether or not the persons involved had a dependent at the time the benefit year was established. If a person set up more than one benefit year, the dependency status as at the time the first benefit year in 1943 was established, is used. In the case of those whose only benefit year current in 1943 was carried over from 1942, the dependency status is taken as at the time that benefit year was established. Since a person's status with regard to dependents is subject to change over any period of time, it is felt that this procedure yields as accurate material as could be obtained by any other means.

In Table 5 the persons with benefit years current in 1943 are classified according to the number of benefit days paid to them in that year. In addition, the number of benefit days paid to the persons in each class of the frequency distribution, are given by sex and province. The distribution of males with respect to number of days paid shows that 13,978, or 52% of the total (27,053) drew no benefit. Of the males who drew benefit, the largest single group falls within the 5-9 day class and the second largest group within the 1-4 day class. The females follow a similar pattern, with 2,988, or 46% of the total (6,505) drawing no benefit and with the two largest single groups falling within the 5-9 and 1-4 day classes. Both sexes show a definite concentration of cases drawing either no benefit or relatively few days. Thus, 63% of the males and 61% of the females either drew no benefit or drew less than ten days.

Table 6 distributes the persons who drew benefit according to daily rate of benefit and dependency status. The daily rate of benefit is determined by the amount of the insured person's daily average contribution during the past two years and whether or not he has a dependent within the meaning of the Act. Persons contribute either 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 5.0, or 6.0 cents a day depending upon the amount of their earnings. As earnings fluctuate an individual's daily contribution may fluctuate, so the daily average does not necessarily coincide with any one of the schedule rates. The daily rate of benefit is calculated by multiplying the daily average contribution during the preceding two years by 40 if the claimant has a dependent and by 34 if he has no dependent. Thus, the concentration of males at rates over \$2.00 a day is due partly to the large proportion of them who claimed at the dependency rate, but more particularly to their relatively high earnings. This is demonstrated by the fact that the largest single group of males having no dependents falls within the \$2.00 - \$2.09 class, the upper limit for a person without dependents being \$2.04 a day.

The largest group of females, on the other hand, falls within the \$1.30-\$1.39 class and even for the relatively few females who drew benefit at the rate for those having dependents, the largest groups fall between \$1.50-\$1.69. This reflects the generally lower earnings of females in the insured group.

Tables 7 to 14 are restricted to those who established benefit years during the calendar year 1943 and the benefit days paid on those benefit years. Tables 7 and 8 classify the persons who established benefit years in 1943 and the benefit days paid on those benefit years by age group, sex and province. Although Table B. shows that the age groups over 50 contain relatively few insured persons, the number of males in those age groups who established benefit years was approximately equal to or greater than the corresponding numbers in the age groups under 50. At the same time, the number of benefit days paid to males in each age group over 50 was consistently greater than the number paid in each age group under 50. Thus, both the incidence of unemployment and its duration were markedly greater for insured males over 50 than for younger insured males.

The age composition of the females in the insured population shows a much greater concentration of females than of males in the age groups under 30. This, along with the small number of females who established benefit years, make definite conclusions regarding the relationship between age and female unemployment somewhat tenuous. It would seem, however, from the data available here that the pattern is somewhat different for the two sexes.

Tables 9 to 12 set forth the industry, sex, age and province of the persons who established benefit years in 1943 as well as the days paid on these benefit years. These tables parallel in form Tables B and C for the insured population.

Tables 13 and 14 classify the persons who set up benefit years in 1943 and the days paid on those benefit years by occupation groups, sex and province. These tables parallel in form Table A for the insured population.

Tables 15 to 17 are concerned with the benefit years terminated in 1943. In Table 15 the total benefit years terminated and those terminated by exhaustion of rights, are classified according to the ages of the persons who established them. The distribution of ages among males who exhausted their benefit rights indicates again the extent to which males in the older age brackets suffered from longer periods of unemployment than those at younger ages.

The benefit years not terminated by exhaustion were predominantly those carried over from 1942 which lapsed during 1943.

Table 16 distributes the benefit years terminated according to the number of benefit days authorized in each case, cross-classified according to the number of days actually paid. This table can be used to determine the extent to which the days authorized in terminated benefit years were utilized. If all benefit years terminated were terminated by exhaustion of rights, Table 16 would show merely a diagonal line of figures. The distribution of days paid to the left of this diagonal line indicates the extent to which those benefit years which lapsed were utilized.

Table 17 classifies terminated benefit years and the days paid on these benefit years by daily rate of benefit, sex and dependency status of the beneficiary.

ANNUAL REPORT ON CURRENT BENEFIT YEARS UNDER THE UNEMPLOYMENT INSURANCE ACT - 1944

The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices. Daily reports, monthly reports and annual reports on benefit years established, benefit years terminated and benefit days paid are supplied to the Bureau of Statistics.

Part I - THE INSURED POPULATION :

No definite figure can be given regarding the number of insured persons on a given date, because of the many interpretations given to the term "insured person" for various purposes. Some who hold an insurance book may never contribute sufficiently within any two-year period to meet the minimum requirements for the receipt of benefit. Others who do not hold a current book may have made sufficient contributions in the past to qualify for benefit. The minimum contribution credits required are : 180 days within the two years immediately preceding the date of the claim and in the case of the second and subsequent initial claims, 60 days contributions since the commencement of the immediately preceding benefit year.

For purposes of the present report the insured population may be taken as those to whom insurance books for the year 1944-45 were issued up to May 31, 1944. Since at least 180 days contributions within the preceding two years are necessary to establish a benefit year, those who entered insurable employment after June 1, 1944 could not qualify during the period covered by this report. Tables A, B and C classify those to whom insurance books were issued during April 1944 by occupation, sex and province; industry, sex and age group; and industry, sex and province. These three tables cover 2,209,850 persons (1,447,530 males and 762,320 females). The total number of insurance books issued during April and May was 2,278,195. Tables 7-14 of Part II classify the persons who established benefit years in 1944 and the benefit days paid to them by sex, age, industry, occupation and province, the categories used being identical with those used for the insured population in Tables A, B and C.

PART II - BENEFIT YEARS :

A benefit year is established when an insured person, upon becoming unemployed, makes application in the prescribed manner and it is proved that at least 180 days contributions have been made in his behalf while working in insurable employment during the two years immediately preceding the date of his claim. In the case of a second or subsequent benefit year it must also be proved that at least 60 days contributions have been made in his behalf while working in insurable employment since the establishment of his immediately preceding benefit year. The daily rate of benefit and number of benefit days authorized are computed at the time the benefit year is established. The benefit rate is determined by the average rate of the employee's contribution during the preceding two years and the duration is determined by the number of days contributed during the preceding five years and the number of days benefit drawn during the preceding three years.

The establishing of a benefit year does not necessarily mean that the insured person concerned draws benefit. It means, merely, that he considers himself to be unemployed, applies for benefit, has satisfied the minimum contribution requirements and that his benefit rights as at that time have been established. The circumstances of each individual case determine eligibility for benefit payments.

An insured person may, for example, be deemed to be employed if, having separated from his major employment, he yet earns more than an average of one dollar a day in some subsidiary employment. Certain days, though unemployment is proven, are declared to be non-compensable. These include the first nine days of proven unemployment in a benefit year (called "waiting days"), the first day of unemployment in any claim week which does not immediately follow or form part of a full week of unemployment, statutory holidays, etc.

Then, the Unemployment Insurance Act is designed, on the whole, to provide compensation in cases of involuntary unemployment for those covered, while restricting or eliminating compensation in cases of voluntary unemployment. Thus, if it is shown that a claimant voluntarily left his employment without just cause, was discharged because of his own misconduct, refused an offer of suitable employment, did not avail himself of an opportunity to work, etc., he may be disqualified for receiving benefit for a period not to exceed six weeks.

In addition, the claimant's circumstances must indicate that he is normally attached to the insured working force. To some extent the minimum contribution requirements constitute proof of recent working experience. Other factors enter, however, and the Act prescribes that benefit cannot be paid to a person who is : not capable of and not available for work, an inmate of an institution wholly or partly supported out of public funds, not residing in Canada (with some exceptions), under sixteen years of age, etc.

The above is given merely by way of illustration and should not be construed as an exhaustive survey of the statutory regulations concerning eligibility for benefit.

In 1944 for example, although 67,513 benefit years were established by 66,954 persons and although a total of 87,663 persons held benefit years currently available (some of which were established in 1943) only 52,950 actually drew benefit. Some persons did not draw benefit because they were re-employed before the expiration of the nine "waiting days", others because they were considered not entitled to benefit on account of the circumstances of the case.

Tables 1 to 17, comprising Part II of this report, set forth, in detail, data respecting benefit years established in 1944, benefit years currently available in that year, some personal characteristics of the persons involved, benefit days paid and benefit years terminated.

Table 1 is a summary statement indicating the extent to which the benefit rights available in 1944 were utilized. It will be noted that of 8,642,643 benefit days available only 1,815,070 (or 21%) were drawn. In 1943 this percentage was 22 and in 1942 it was 24. Thus, the benefits available for those who applied for them, were in general, more than ample to meet the need during 1944.

Table 2 is also a summary statement classifying the benefit years established and total benefit days authorized in 1944 by province and the persons involved by sex and province. A total of 378 persons established two benefit years during the calendar year and one female established three.

In Table 3 the 87,663 persons with current benefit years available in 1944 (this includes those whose only current benefit year available in 1944 carried over from 1943), the persons who drew benefit, the benefit days paid and amount of benefit paid, are classified by sex and province.

The amount of benefit paid as given in Table 3 is not exactly the amount paid out of the Unemployment Insurance Fund in that year. The precise total of benefit payments during the calendar year 1944 was \$3,265,708 (or 96.3% of the \$3,390,010 shown in Table 3). This difference is unavoidable if the amount of benefit paid is to be shown by sex and province as a comparable figure to the number of beneficiaries and number of benefit days paid. Each punch card representing a benefit year contains the daily rate of benefit authorized and the number of days paid. The daily rate as originally established appears on the card although the rate may change during the lifetime of the benefit year because of a change in dependency status. These cards are sorted by daily rate of benefit for each sex and province and a total of days paid at each daily rate is obtained. The amount of benefit paid is then estimated by multiplying the total of days paid at each daily rate by that daily rate. This is the only method available for securing the amount of benefit paid by sex and province.

Table 4 classifies the persons with current benefit years available and the benefit days paid to them by dependency status, sex and province. Under the Unemployment Insurance Act, claimants with one or more dependents are paid at a higher rate than those with no dependents. The dependency status of these persons as at the time the benefit year was established is recorded. If a person

established more than one benefit year during the calendar year, for purposes of this report, his status is taken as at the time he established his first benefit year during the calendar year. Persons whose only benefit year available in 1944 was carried over from 1943 are classified according to their status at the time that benefit year was established. Since a person's dependency status is subject to change over a period of time, it is felt that results obtained by this method portray the situation as accurately as it can be presented under the circumstances.

In Table 5 persons with benefit years current in 1944 are classified according to the number of days' benefit paid in that year and the benefit days paid in each category are given by province. Of the 64,172 males, 24,651 (or 38.4%) drew no benefit, while the largest single class drew from 5-9 days and the second largest from 1-4 days. Thus, 34,381 males (or 53.6%) drew either no benefit or less than 10 days. This may be compared with the 52% of males who drew no benefit in 1943 and the 63% who drew either no benefit or less than 10 days. The females follow a similar pattern with 10,062 (or 42.8%) drawing no days and 13,211 (or 56.2%) drawing either no benefit or less than 10 days in 1944, compared with 46% who drew no benefit and 61% who drew either no benefit or less than 10 days in 1943.

Table 6 distributes the persons who drew benefit in 1944 and the benefit days paid to them by daily rate of benefit and dependency status. Under the terms of the Unemployment Insurance Act, a claimant's daily rate of benefit is determined by the daily average contribution made in his behalf during the two years immediately preceding the date of his claim and on whether or not he has a dependent within the meaning of the Act. Insured persons contribute either 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 5.0 or 6.0 cents a day while employed in insurable employment, depending upon the amount of their earnings (see the second schedule of the Act). As the individual's earnings change beyond the class limits prescribed, his daily contribution changes, so the daily average for the two years need not coincide with any one of the schedule rates. The daily rate of benefit is calculated by multiplying the daily average contribution during the preceding two years by 40 if the claimant has a dependent or by 34 if he has no dependent. It will be seen that 9,518 (or 43%) of the 22,197 males with a dependent, drew benefit at the top rate of \$2.40 a day and 19,847 males (or 89% of those with a dependent who drew benefit) were paid at the rate of \$2.00 a day or more. This indicates average weekly earnings of \$26.00 or more per week during the preceding two years for the 43% paid at \$2.40 a day and average earnings of \$20.00 or more per week for the 89% paid \$2.00 a day or more. Similarly, the males without dependents are concentrated in the higher classes of daily rates, 7,405 of them (or 43%) being paid from \$2.00 to \$2.04 (the maximum for those without dependents) while 12,908 (or 75%) received \$1.70 or more a day, indicating average weekly earnings of \$20.00 or more.

The females are distributed in a different pattern with respect to daily rate of benefit. This is due in part to the much smaller proportion of females having a dependent (4.7%) as compared with males (56.2%). The largest single group of females with dependents appears in the class paid from \$2.30 to \$2.39 a day but the largest group without dependents is found in the class paid from \$1.30 to \$1.39 a day, indicating average earnings of about \$15.00 a week. Among females without dependents 4,322 (or 35.8%) were paid \$1.70 a day or more, indicating average earnings of \$20.00 a week or more. Thus the different distribution of females with respect to daily rate of benefit is also due to the generally lower earnings of females.

Tables 7-14 include only those who established benefit years during the calendar year 1944 and the benefit days paid on those benefit years. In Tables 7 and 8 the persons who established benefit years and the benefit days paid are classified by age group, sex and province. Table 8 shows the age composition of the insured population for Canada by sex. Insured males over 55 number 252,060 (or 16% of the male insured population), yet they established 13,136 benefit years (or 27% of the male total) and were paid 425,145 benefit days (or 39% of the male total). The experience of 1944, in common with previous years, would indicate, then, that males in the older age groups are not only more likely to become unemployed than are those in the middle and younger ages but they tend to be unemployed for longer periods.

The female insured population has a different age composition, its numbers being mainly concentrated in the ages under 30. The age group 20 to 24 contains both the largest number of benefit years established and the highest percentage of insured females establishing benefit years. Yet in this class the percentage establishing benefit years was only 3.4. As with males, however, the average

number of days paid per benefit year increases with age, the averages ranging from 14.2 days for those under 20 to 43.7 days for those 65 and over.

In Tables 9-12 the benefit years established in 1944 and the benefit days paid on them are classified by industry and age, and industry and province, by sex. The categories used in these tables are the same as those in Tables B and C for the insured population.

Tables 13 and 14 classify benefit years established in 1944 and the benefit days paid on them by occupation and province, by sex, in the same categories used for the insured population in Table A.

Tables 15-17 are concerned with benefit years terminated during the calendar year 1944. In Table 15, total benefit years terminated and those terminated by exhaustion of rights are classified by age and sex. A benefit year can be terminated by exhaustion, lapsing, death or other reason. Exhaustion means that the benefit rights authorized have been entirely spent. If, however, the authorized rights have not been exhausted the benefit year automatically terminates (lapses) twelve months after the day on which it was established. Death, permanent disability or any permanent removal of the person concerned from the working force will automatically terminate a benefit year.

Table 16 presents a cross-classification of the number of days authorized by the number of days paid for benefit years terminated in 1944. This indicates the extent to which the benefit rights available were used at the time of termination.

Table 17 classifies benefit years terminated during 1944 and the days paid on them by daily rate of benefit, sex and dependency status. This table can be compared with Table 6 which presents the same data for all who draw benefit in 1944.

ANNUAL REPORT ON CURRENT BENEFIT YEARS UNDER THE UNEMPLOYMENT INSURANCE ACT - 1945

The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission, through the Treasury Offices.

PART I - THE INSURED POPULATION :

It is impossible to provide a specific figure for the number of insured persons at a given time that will satisfy all requirements. For some purposes it is useful to know the number of insurance books issued in a certain year. For other purposes the number of persons who have fulfilled the minimum contribution requirements necessary to establish benefit rights under the Act would be appropriate. Again, the number of persons employed in insurable employment at a given time may be used.

The last is the concept used in this report. The insured population, as presented here in Tables A, B and C, consists of those for whom insurance books and contribution cards were renewed in April 1945 and those to whom a new insurance book was issued for the first time in that month. This is substantially the population from which those who established benefit years in 1945 could have been drawn. A minimum of 180 days' contribution in the past two years is required to establish benefit rights. Therefore, those who entered insurable employment for the first time after June 1, 1945 could not qualify during that calendar year. Those who renewed their books after June 1st, are obviously engaged in insurable employment for only a portion of the year. As at May 31, 1945, the total of insurance books and cards issued in that insurance year was 2,237,277. Tables A, B and C, of this report, include 2,198,840 persons (1,444,430 males and 754,410 females) who are classified by sex, age, industry and province, and by sex, occupation and province. In Tables 11 to 16 of Part II, persons establishing benefit years and the benefit days paid to them in 1945 are classified in the same categories as used for the insured population.

PART II - BENEFIT YEARS :

A benefit year is established under the Unemployment Insurance Act, when an insured person, upon becoming unemployed, makes application in the prescribed manner and it is proved that at least 180 days' contribution has been made on his behalf during the two years immediately preceding the date of his claim. In addition, a second or subsequent benefit year for a person requires that at least 60 of these contributory days be recorded since the commencement of his immediately preceding benefit year. (Effective October 1, 1946 the Act was amended and, as a result, two additional statutory conditions must be fulfilled. This does not, however, concern the benefit years recorded in the present report). The establishing of a benefit year is merely a device whereby a person's right to benefit and the amount of his entitlement can be determined at any time. The duration of benefit authorized is determined by the number of days contributed in the preceding five years and the number of days benefit drawn in the preceding three years. The daily rate of benefit authorized is determined by the daily average contribution made on behalf of the claimant during the preceding two years.

The fact that a benefit year has been established does not necessarily mean that the insured person concerned draws benefit. It only indicates that he considers himself to be unemployed, has applied for benefit in the prescribed manner and that his contribution history fulfills the minimum requirements of the law. A benefit ledger card is then set up for him in the Treasury Office (to record his entitlement and the payments made) and it is from the initial claim form and these benefit ledger cards that the basic data used in preparing this report are derived.

The benefit authorized can then be drawn upon during one or a number of spells of unemployment until either the rights are exhausted or twelve months have elapsed since the benefit year was established, whichever occurs first. The circumstances surrounding each individual separation from employment must be investigated in order to determine whether or not benefit is payable in the case.

Generally speaking, the Unemployment Insurance Act is designed to provide benefit during a spell of involuntary unemployment suffered by a person who is normally attached to the insured working force. To be considered unemployed within the meaning of the Act, an individual must either have separated from his previous employment or have been put on short time. If he has separated, he may still be deemed to be employed during any period for which he received an amount substantially equivalent to his normal earnings in the form of dismissal pay or payment in lieu of notice. Again, he may be considered employed if, having separated from his major employment, he yet earns more than an average of one dollar a day in some subsidiary employment.

Certain days of proven unemployment are rendered non-compensable through special provisions of the Act. For example, the first nine days of unemployment in any benefit year are not compensated ("waiting days") nor is the first day of unemployment in any claim week unless it forms part of or immediately follows a full claim week of unemployment.

Unemployment may be considered voluntary if the claimant voluntarily left his employment without just cause; if he was discharged because of his own misconduct; if he refused an offer of suitable employment or neglected to avail himself of an opportunity to work. In such cases as these the claimant is subject to disqualification for a period not to exceed six weeks. In other words, to be eligible for benefit the claimant must make a statutory declaration that he is "capable of and available for work but unable to find suitable employment". Thus, days of illness, voluntary vacation, etc., could not be compensated on the basis that the person was not capable of employment or not available for employment.

Normal attachment to the insured working force is indicated by the individual's past contribution history and his circumstances at the time. Thus, the provisions requiring at least 180 days' contribution during the past two years, at least 60 of which must have been recorded since the establishment of the immediately preceding benefit year. The factors mentioned above regarding capability and availability for work are also pertinent here. In addition, there are provisions that benefit cannot be paid to a person who is : an inmate of an institution wholly or partly supported out of public funds, not residing in Canada (with some exceptions), under sixteen years of age, etc.

The above survey of conditions surrounding the payment of benefit is given merely by way of illustration and should not be construed as exhaustive.

During 1945 there were 224,205 benefit years established, 270,413 benefit years available (some, established in 1944, were still available for part of 1945) but only 181,428 persons actually drew benefit. The others either were reemployed before the expiration of the nine waiting days or were considered not entitled to benefit at the time because of the circumstances of the case.

Tables 1 to 19, comprising Part II of this report, set forth in some detail data respecting benefit years established in 1945, benefit years currently available in that year, the personal characteristics of the persons involved, benefits paid and benefit years terminated in 1945.

Tables 1 to 4 are summary statements derived from the more detailed analyses that follow. In Table I, for example, the benefit days available in 1945 are compared with benefit days paid. Of a total of 45,521,951 days available only 8,375,138 (or 19 per cent) were used. It would appear, therefore, that the benefit rights available in 1945 were more than sufficient, on the whole, to meet the requirements for them. Table 2 summarizes the number of benefit years established during 1945, total benefit days authorized and number of persons who established benefit years, by province. The 224,205 benefit years established in 1945 were

established by 223,286 persons, 919 of whom established two benefit years during that calendar year. In Table 3, the persons with current benefit years, persons who drew benefit, benefit days paid and amount of benefit paid are classified by sex and province. The benefit days paid and amount of benefit paid as presented here exceed by about 1,000,000 days and \$2,000,000 the total of the twelve months in 1945 already published in the Monthly Statistical Report on the Operation of the Unemployment Insurance Act. This discrepancy arises because of a difference in the time period for which reports are received. To obtain a monthly figure on about the last working day of each month, the Treasury has, until recently, followed the practice of closing the books on the 20th of each month. Thus, the amount of benefit paid as recorded in December 1944 was actually the amount paid from November 21st to December 20th, 1944 and so on. Ordinarily this would have no appreciable effect on an annual total, but the great difference between benefit payments in December 1944 and January 1945 compared with December 1945 and January 1946 makes a very significant difference. These amounts were : December 1944, \$537,220, January 1945, \$546,569; December 1945, \$3,450,853 and January 1946, \$4,493,252.

The amount of benefit paid as presented in this report is obtained from the number of days paid (as taken from the benefit ledger card at the end of the calendar year) and the daily rate of benefit (as obtained when the benefit year was established from the computation section of the initial claim form) both of which are punched on the punch card prepared for each benefit year established. There will always, therefore, be a slight difference between the amount obtained in this way and the amounts published monthly, due to changes in daily rate of benefit arising from changes in the claimant's dependency status during the life of the benefit year. This difference should not, however, exceed 5% since many of the changes are compensatory.

In Table 4 the persons with current benefit years and the benefit days paid to them during 1945 are classified by dependency status, sex and province. A claimant with one or more dependants is paid a higher rate of benefit than is one with no dependent. The dependency status of each claimant is recorded here as at the time his benefit year was established. Since a person's status with regard to dependants is subject to change over time it is felt that this method yields as accurate results as could be obtained by any alternative method. Those who established more than one benefit year during the calendar year are classified as at the time the first benefit year was established.

Persons with benefit years current and the benefit days paid to them during the calendar year 1945 are classified by number of days benefit paid, sex and province in Tables 5 and 6. In the case of both males and females the largest single group drew no benefit, i.e. 66,539 of the 200,096 males (33.3%) and 22,446 of the 70,317 females (31.9%) fall into this category. The second largest group of each sex drew from five to nine days, while the third largest group of males were paid from fifteen to nineteen days and the third largest group of females from one to four days. In all, 91,582 males (or 45.8%) and 29,482 females (or 41.8%) drew either no benefit or less than ten days. This can be compared with 38.4% of males who drew no benefit in 1944 and 52% who drew no benefit in 1943 while the percentages of males who drew either no benefit or less than ten days were 63 and 53.6 respectively in 1943 and 1944. In 1943 and 1944, 46% and 42.8%, respectively, of females drew no benefit, while 61% and 56.2%, respectively, drew either no benefit or less than ten days.

In Tables 7 and 8 persons to whom benefit was paid and the benefit days paid to them in 1945 are classified by daily rate of benefit, dependency status, sex and province. The daily rate of benefit payable to a claimant is determined by the daily average contribution made on his behalf during the two years immediately preceding the date of his claim. Those with a dependent are entitled to 40 times and those with no dependent to 34 times the daily average contribution. The insured person contributes either 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 5.0 or 6.0 cents for each day he is employed in insurable employment, the amount being determined by the rate of his earnings (see the second schedule of the Act as amended in September 1943). Since an individual's earnings may fluctuate during the period, the daily average contribution need not correspond with any one of the schedule rates. Thus the maximum daily rate of benefit for those having a dependent is \$2.40 and for those with no dependent \$2.04.

Of the 85,289 male beneficiaries having a dependent, 44,051 (51.6%) drew benefit at the top rate of \$2.40 a day, while 30,435 (34.3%) were paid benefit at the rate of \$2.00 a day or more. This indicates average weekly earnings of \$26.00 or more during the two years immediately preceding the date of the claim for those paid at \$2.40 and average weekly earnings in the same period of \$20.00 or more for those paid \$2.00 or more a day. The males with no dependent are slightly less concentrated in the higher classes of daily benefit rates, 23,134 (47.9%) being paid from \$2.00 - \$2.09 a day (the maximum for those without dependents being \$2.04 a day) while 37,811 (78.3%) received \$1.70 a day or more, indicating average weekly earnings of \$20.00 or more.

The proportion of female beneficiaries claiming a dependent is much lower (10.4%) than of male (65.9%).

Partly for this reason females as a whole are distributed in lower daily rates of benefit than males, but in addition this distribution of females indicates their generally lower earnings. Thus, only 424 females with a dependent (8.6%) were paid \$2.40 a day while the largest single group of females having dependents received \$2.00 to \$2.09 a day, indicating average weekly earnings of \$20.00 to \$25.99. The largest group of females without dependents drew \$2.00 to \$2.09 a day, the second largest from \$1.90 to \$1.99 a day, while almost the same number drew from \$1.70 to \$1.79. Thus, 14.7% of female beneficiaries without dependents had average weekly earnings of \$26.00 or more in the preceding two years, 47.9% had average weekly earnings of \$20.00 or more and 83.5% had average weekly earnings of \$15.00 or more.

Tables 9-16 include only those who established benefit years during 1945 and the benefit days paid on those benefit years in that calendar year. The persons who established benefit years and the benefit days paid to them are classified in Tables 9 and 10 by age group, sex and province. In Table B, the age composition of the insured population is presented, by sex. Insured males 55 years of age and over constitute 16.9% of the male insured for whom ages are given but they established 23.2% of the benefit years set up by males and drew 33.8% of the benefit days paid to males. These data, then, confirm those from other sources indicating that males in the older ages are somewhat more likely to become unemployed than are younger males and when out of work find it more difficult to obtain other employment.

The age composition of the female insured population is quite different from that of the male, insured females being mainly concentrated in the age groups under 30. There is no clear pattern of differences in the unemployment experience of women in various age groups during 1945. Thus, although the average benefit days paid to males ranged from 21 days for those under 20 to 54 days for those 65 and over, the average days paid to females shows a surprising consistency by age. In the age groups above 30 the range is from 42 to 47 days while in the groups under 30 the range is from 28 to 39 days. For all males, average days paid are 30, and for all females, 39.

In Tables 11 and 12 persons establishing benefit years in 1945 and the days paid to them are classified by industry, age group and sex paralleling Table B for the insured population.

Persons who established benefit years and the days paid to them are classified by industry, province and sex in Tables 13 and 14 in the same categories used for the insured population in Table C.

Tables 15 and 16 classify the persons who established benefit years and the benefit days paid to them by occupation, sex and province in a manner comparable with the insured population in Table A.

Tables 17 to 19 are concerned with benefit years terminated during the calendar year 1945. The benefit years terminated are classified, in Table 17, by days benefit authorized, benefit days paid and sex. This table indicates the extent to which the benefit rights available were used at the time of termination. A benefit year can be terminated by exhaustion, lapsing, death or other reason. Exhaustion means that the benefit days available have all been paid. If, however, the rights available have not been used up within twelve months of the date on which the benefit year was established, it automatically lapses. Death, permanent disability or other permanent removal of the person from the working force terminates the benefit year.

In Table 18, benefit years terminated during 1945 are classified by daily rate of benefit, number of benefit days paid, sex and dependency status. The total benefit years terminated in 1945 and those terminated by exhaustion of rights are classified, in Table 19, by age group and sex.

Table A. - Number of Persons Issued an Unemployment Insurance Book, April 1, 1945,

Classified by Occupation, Sex and Province.

ANNUAL REPORT ON CURRENT BENEFIT YEARS UNDER THE UNEMPLOYMENT INSURANCE ACT - 1946

The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

PART I - THE INSURED POPULATION :

The term "insured population" can be given a variety of meanings, each of which is useful for a certain purpose. For example, the number of insurance books and contribution cards issued in a year may be used or, for another purpose, the number of persons who have satisfied the minimum contribution requirements necessary to establish benefit rights under the Act may be the most useful concept, whereas the number of persons employed in insurable employment at a given time is most appropriate in other connections. It is this last concept that is used in Tables A and B of the present report.

Unemployment Insurance books and contribution cards are renewed each April 1st, providing a count of persons actively engaged in insured employment or unemployed but reporting to a local office for one reason or another. To secure information on the personal and employment characteristics of insured persons the sex, year of birth and industry of a ten percent sample of renewals and new entrants are obtained. The sample is composed of all those whose insurance numbers end in 4.

Tables A and B present tabulations of returns for the sample (representing 2,128,700 persons) received at the Dominion Bureau of Statistics covering the book renewal in April 1946 and new entrants into insurance, having sample numbers, during April. This is substantially the population from which those establishing benefit years during 1946 could have been drawn. Since a minimum of 180 days' contributions during the past two years are required to establish a benefit year, those entering insurance after May 31, 1946 could not qualify during that calendar year. Those who renewed their books after April 30th have obviously been outside insured employment for a while and many of them customarily engage in insurable employment for only a portion of each year. Classifications by industry, sex and age are presented in Table A and by industry, sex and province in Table B. Comparable data for persons who establish benefit years and the benefit days paid to them in 1946 will be found in Tables 11-14 of Part II of this report.

PART II - BENEFIT YEARS :

The "benefit year" is a device whereby the benefit rights, if any, available to an insured person can be computed at any time. When an insured person becomes unemployed and makes application, a benefit year is established for him if he satisfies the following four statutory conditions :

1. - that at least 180 days' contributions have been paid in his behalf during the two years immediately preceding the date of his claim and, in the case of his second and all subsequent benefit years, at least 60 days' contributions have been paid in his behalf since the commencement of his immediately preceding benefit year;
2. - that he has made application in the prescribed manner;
3. - that he is at least sixteen years of age;

4. - that more than half of the contributions paid in his behalf during the year immediately preceding the date of his claim have been paid at a rate other than the minimum rate ("class O") provided in the first schedule of the Unemployment Insurance Act.

For each benefit year established, the duration of benefit authorized is computed on the basis of the number of days contributed in the immediately preceding five years and days benefit drawn in the immediately preceding three years; and the daily rate of benefit is determined from the daily average contribution paid during the preceding two years and on whether or not the claimant has a dependent within the meaning of the Act. The establishment of a benefit year for a claimant does not necessarily mean that he is entitled to draw benefit immediately. It merely means that he has considered himself to be unemployed, has made application and has fulfilled the minimum requirements of the Act for the establishing of benefit rights (the above four statutory conditions).

Entitlement to benefit during each period of unemployment is determined on the basis of the circumstances of the case. The Unemployment Insurance Act is designed to provide protection against the hazard of involuntary unemployment for those whose contribution records indicate more than merely nominal attachment to the insured working force. When a benefit year has been established, the benefit rights authorized may be drawn upon during successive periods of unemployment until either the rights authorized have been exhausted or twelve months have passed, whichever occurs first. When a claimant's benefit year terminates he may immediately establish another if he can fulfill the four basic statutory conditions.

The receipt of benefit at any time depends, however, upon other conditions. The first nine days of proven unemployment in any benefit year are not compensated and the first day of unemployment in a claim week is not compensable, unless it immediately follows or forms part of a full week of unemployment. Apart from these circumstances, to be eligible for benefit the claimant must periodically declare that he is unemployed, is capable of and available for work and unable to find suitable employment. To be considered unemployed within the meaning of the Act a person must have become separated from his previous employment or have been put on short time. He is deemed to be employed during any period for which he has received dismissal pay or payment in lieu of notice and even though separated from his major employment, if he earns more than an average of one dollar and fifty cents a day in some subsidiary employment.

During a period of illness, own-account employment or voluntary vacation a claimant is considered not capable of or not available for employment. Voluntarily leaving the former employment without just cause, discharge on account of his own misconduct, refusal of an offer of suitable employment or neglecting to avail himself of an opportunity to work at suitable employment render the claimant subject to disqualification from benefit for a period not exceeding six weeks, such a period being considered voluntary unemployment.

Significant attachment to the insured working force is usually indicated by the claimant's past contribution record. Thus the requirement that at least 180 days' contributions must have been recorded within the past two years and at least 60 days since the commencement of the immediately preceding benefit year. In addition benefit cannot be paid to a person who is : an inmate of an institution supported wholly or partly out of public funds, not residing in Canada (with some exceptions) etc. The basic statutory conditions concerning those under 16 years of age and those whose contributions have been mainly in "class O" are also pertinent when one considers attachment to the insured working force.

This brief summary of the conditions surrounding the payment of benefit is intended merely as an aid to those who desire to interpret and use the following tables. For a complete and strictly accurate understanding of these conditions reference should be made to the Unemployment Insurance Act as amended in October 1946 and the regulations passed by Order in Council under the authority of that statute.

There were 305,670 benefit years established by 304,743 persons during 1946, while 486,600 persons had benefit years available during that calendar year (some benefit years established in 1945 having carried over into 1946) and 351,476 were paid benefit. Tables 1-19 of this report present some characteristics of those who established benefit years, those who drew benefit and those whose benefit years terminated during 1946.

Tables 1 to 4 represent summaries derived from the more detailed tables that follow. Table 1 is a very brief summary of the benefit days available and benefit days paid during 1946. Of the 87,286,810 days available, 23,860,678 days, or about 27%, were paid. It would appear, therefore, that the benefit rights available to claimants during 1946 were more than sufficient, on the whole, to meet the need for them. In Table 2, the number of benefit years established, benefit days authorized and number of persons establishing benefit years are classified by province. The 305,670 benefit years established in 1946 involved 304,743 persons, 927 of whom established two benefit years during that calendar year. Table 3 presents a summary of the number of persons with current benefit years (including those with a benefit year established in 1945 that was still available during some part of 1946) persons who drew benefit, benefit days paid and amount of benefit paid, by sex and province, during 1946. The number of days benefit paid and amount of benefit paid as recorded in Table 3 are obtained from the punch cards set up for each benefit year established. The daily rate of benefit and days authorized are punched at the time the benefit year is established and the days benefit paid are obtained and punched either when the benefit year terminates or at the end of the calendar year in the case of those still in existence at December 31st. Amount of benefit paid is then estimated by sorting the punch cards and obtaining a tabulator total for days paid at each daily rate. This estimate will never agree exactly with the actual amount paid out of the unemployment insurance fund since the daily rate of benefit for some claimants will change during the life of the benefit year as the claimant gains or loses a dependent within the meaning of the Act. Since many of these changes are compensatory, however, the difference due to this factor should be negligible. A more substantial difference between the monthly figures for 1946 and the amount in Table 3 is caused by the practice that was followed in the Treasury Offices until September 1946 of closing off the books in the districts on the 20th of each month in order to achieve a balance, nationally, by the end of the month. Thus the total of the twelve monthly figures for 1946 actually covers the period December 21st 1945 to December 31, 1946, giving a total of \$51,084,807 as against the \$48,187,170 recorded in Table 3. The method used in Table 3 is the only means available for obtaining the days benefit paid and amount of benefit paid by sex and, if needed by age, dependency status and other factors.

Persons with benefit years current during 1946 are classified, in Table 4, according to whether or not they had a dependent within the meaning of the Act at the time the benefit year was established. Since a person's status with respect to dependents is subject to change over time, it is felt that most satisfactory results are obtained by recording the status in this manner. The status of those who established more than one benefit year during 1946 is determined at the time the first benefit year came into being.

In Tables 5 and 6 persons with benefit years current during 1946 and the benefit days paid to them are classified according to number of benefit days paid, sex and province. Of the 367,548 males and 119,052 females with benefit years current in 1946, 97,783 males, 27 percent, and 37,341 females, 31 percent, drew no benefit. The largest class of males and females drew from 5-9 days benefit and the second largest class drew from 1 to 4 days. Thus 35 percent of the males and 39 percent of the females were paid either no benefit or less than 10 days. In 1945, 33 percent of the males and 32 percent of the females drew no benefit and 46 percent of the males and 42 percent of the females drew either no benefit or less than 10 days.

Those who drew benefit in 1946 and the benefit days paid to them are classified in Tables 7 and 8 by daily rate of benefit, sex and dependency status for the provinces. The daily rate of benefit is determined by the daily average contribution paid on behalf of an insured person during the two years immediately preceding the date of his claim and on whether or not he has a dependent as defined in the Act. The insured person's share of the daily contribution amounts to 1.5, 2.0, 2.5, 3.0, 3.5, 4.0, 5.0, or 6.0 cents according to his earnings. His daily average contribution over the two-year period is multiplied by 34 if he has no dependent or by 40 if he has a dependent, to determine his daily rate of benefit. For example, a claimant who had contributed at the rate of 6.0 cents a day and had a dependent would be entitled to benefit at the rate of \$2.40 a day and, from the schedule of contributions given in the Act, it is known that his weekly earnings during the two year period have amounted to \$26 or more. Since a person's earnings often fluctuate over a period, the daily average contribution need not correspond with any one of the schedule rates.

Table 7 shows that during 1946 the majority (56 percent) of male beneficiaries having a dependent were paid benefit at the maximum rate of \$2.40 a day while slightly more than half (52 percent) of males without a dependent were paid at a rate falling between \$2.00 and \$2.09 (the maximum for those without a dependent being \$2.04) indicating average weekly earnings of \$26 or more. At the same time 94 percent of males with dependents were paid \$2.00 or more a day and 80 percent of males without a dependent received \$1.70 or more a day, indicating in each case average weekly earnings of \$20 or more.

A much lower proportion of female than of male beneficiaries is paid at the higher benefit rates. This is due partly to the fact that only a small proportion of female beneficiaries (5 percent) is paid at the rate for those having a dependent but lower average weekly earnings for females are also indicated. For example, 14 percent of females having a dependent and 15 percent with no dependent were paid at the maximum rates of \$2.40 and \$2.00-\$2.04, although an additional 30 percent of those with a dependent were paid from \$2.10 to \$2.39 and so must have had earnings of \$26 a week or more for part of the two-year period. But almost as many females without a dependent (14 percent) were paid at rates between \$1.30 and \$1.39 as at those between \$2.00 and \$2.09. One reason for these lower earnings is apparent in Table 9 where the generally younger ages of females who established benefit years is evident.

Tables 9-16 include only those persons who established benefit years during the calendar year 1946 and the benefit days paid on those benefit years during that calendar year. Persons who established benefit years and the benefit days paid are classified in Tables 9 and 10 by age group, in Tables 11 and 12 by industry and age and in Tables 13 and 14 by industry and province, in the same categories as given in Tables A and B for the insured population. In Tables 15 and 16 the persons who established benefit years and the benefit days paid on them during 1946 are classified by occupation, sex and province.

Tables 17-19 are concerned with the benefit years that terminated in 1946. A benefit year terminates either twelve months after it was established or when the benefit rights available have been exhausted, whichever occurs first. In the former case the benefit year is said to terminate by lapsing and in the latter case by exhaustion. Benefit years terminated during 1946 are classified, in Table 17, by number of benefit days authorized and benefit days paid. This gives an indication of the extent to which the authorized benefit rights were utilized at the time of termination. In Table 18 the benefit years terminated are classified by daily rate of benefit, number of benefit days paid, sex and dependency status. Total benefit years terminated and those terminated by exhaustion are classified in Table 19 by age group and sex.

ANNUAL REPORT ON CURRENT BENEFIT YEARS UNDER THE UNEMPLOYMENT INSURANCE ACT
1947

The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

PART I - THE INSURED POPULATION :

The term "insured population" can be given a variety of meanings, each of which is useful for certain purposes. For example, the number of insurance books and contribution cards issued in a year may be used or, for another purpose, the number of persons who have satisfied the minimum contribution requirements necessary to establish benefit rights under the Act may be the most useful concept, whereas the number of persons employed in insurable employment at a given time is most appropriate in other connections. It is this last concept that is used in Tables A, B and C of the present report.

Unemployment Insurance books and contribution cards are renewed each April 1st, providing a count of persons actively engaged in insured employment or unemployed but reporting to a local office for one reason or another. To secure information on the personal and employment characteristics of insured persons, the sex, year of birth, occupation and industry of a ten percent sample of renewals and new entrants are obtained. The sample is composed of all those whose insurance numbers end in 4.

Tables A, B and C present tabulations of returns for the sample (representing 2,280,200 persons) received at the Dominion Bureau of Statistics covering the book renewal in April 1947 and new entrants into insurance, having sample numbers, during April. This is substantially the population from which those establishing benefit years during 1947 could have been drawn. Since a minimum of 180 days' contributions during the past two years is required to establish a benefit year, those entering insurance after May 31st, 1947 could not qualify during that calendar year. Those who renewed their books after April 30th have obviously been outside insured employment for a while and many of them customarily engage in insurable employment for only a portion of each year. Classifications by occupation, sex and province are presented in Table A, by industry, sex and age in Table B and by industry, sex and province in Table C. Comparable data for persons who establish benefit years and the benefit days paid to them in 1947 will be found in Tables 11-16 of Part II of this report.

PART II - BENEFIT YEARS :

The "benefit year" is a device whereby the benefit rights, if

any, available to an insured person can be computed at any time. When an insured person becomes unemployed and makes application, a benefit year is established for him if he satisfies the following four statutory conditions :

1. - that at least 180 days' contributions have been paid in his behalf during the two years immediately preceding the date of his claim and, in the case of his second and all subsequent benefit years, at least 60 days' contributions have been paid in his behalf since the commencement of his immediately preceding benefit year;
2. - that he has made application in the prescribed manner;
3. - that he is at least 16 years of age;
4. - that more than half of the contributions paid in his behalf during the year immediately preceding the date of his claim have been paid at a rate other than the minimum rate("class O") provided in the first schedule of the Unemployment Insurance Act.

For each benefit year established, the duration of benefit authorized is computed on the basis of the number of days contributed in the immediately preceding five years and days benefit drawn in the immediately preceding three years; and the daily rate of benefit is determined from the daily average contributions paid during the preceding two years and on whether or not the claimant has a dependent within the meaning of the Act. The establishment of a benefit year for a claimant does not necessarily mean that he is entitled to draw benefit immediately. It merely means that he has considered himself to be unemployed, has made application and has fulfilled the minimum requirements of the Act for the establishing of benefit rights (the above four statutory conditions).

Entitlement to benefit during each period of unemployment is determined on the basis of the circumstances of the case. The Unemployment Insurance Act is designed to provide protection against the hazard of involuntary unemployment for those whose contribution records indicate more than merely nominal attachment to the insured working force. When a benefit year has been established, the benefit rights authorized may be drawn upon during successive periods of unemployment until either the rights authorized have been exhausted or twelve months have passed, whichever occurs first. When a claimant's benefit year terminates he may immediately establish another if he can fulfill the four basic statutory conditions.

The receipt of benefit at any time depends, however, upon other conditions. The first nine days of proven unemployment in any benefit year are not compensated, and the first day of unemployment in a claim week is not compensable unless it immediately follows or forms part of a full week of unemployment. Apart from these circumstances, to be eligible for benefit the claimant must periodically declare that he is unemployed, is capable of and available for work and unable to find suitable employment. To be

considered unemployed within the meaning of the Act a person must have become separated from his previous employment or have been put on short time. He is deemed to be employed during any period for which he has received dismissal pay or payment in lieu of notice and, even though separated from his major employment, if he earns more than an average of one dollar and fifty cents a day in some subsidiary employment.

During a period of illness, own-account employment or voluntary vacation a claimant is considered not capable of or not available for employment. Voluntarily leaving the former employment without just cause, discharge on account of his own misconduct, refusal of an offer of suitable employment or neglecting to avail himself of an opportunity to work at suitable employment, render the claimant subject to disqualification from benefit for a period not exceeding six weeks, such a period being considered voluntary unemployment.

Significant attachment to the insured working force is usually indicated by the claimant's past contribution record. Thus the requirement that at least 180 days' contributions must have been recorded within the past two years and at least 60 days since the commencement of the immediately preceding benefit year. In addition, benefit cannot be paid to a person who is : an inmate of an institution supported wholly or partly out of public funds, not residing in Canada (with some exceptions) etc. The basic statutory conditions concerning those under 16 years of age and those whose contributions have been mainly in "class O" are also pertinent when one considers attachment to the insured working force.

This brief summary of the conditions surrounding the payment of benefit is intended merely as an aid to those who desire to interpret and use the following tables. For a complete and strictly accurate understanding of these conditions reference should be made to the Unemployment Insurance Act as amended in October 1946 and the regulations passed by Order in Council under the authority of that statute.

There were ^{266,249}~~205,117~~ benefit years established by ^{265,117}~~203,005~~ persons during 1947, while 512,191 persons had benefit years available during that calendar year (some benefit years established in 1946 having carried over into 1947) and 283,725 were paid benefit. Tables 1-19 of this report present some characteristics of those who established benefit years, those who drew benefit and those whose benefit years terminated during 1947.

Tables 1 to 4 represent summaries derived from the more detailed tables that follow. Table 1 is a very brief summary of the benefit days available and benefit days paid during 1947. Of the 94,125,968 days available, 15,829,578 days, or about 17 percent, were paid. It would appear, therefore, that the benefit rights available to claimants during 1947 were more than sufficient, on the whole, to meet the need for them. In Table 2, the number of benefit years established, benefit ^{DAYS}~~years~~ authorized and number of persons establishing benefit years are classified by province. The ^{266,249}~~205,117~~ benefit years established in 1947 involved ^{265,117}~~203,005~~ persons, 1,132 of whom established two benefit years during that calendar year. Table 3 presents a summary of the number of persons with current benefit years (including those with a benefit

year established in 1946 that was still available during some part of 1947), persons who drew benefit, benefit days paid and amount of benefit paid, by sex and province, during 1947. The number of days benefit paid and amount of benefit paid as recorded in Table 3 are obtained from the punch cards set up for each benefit year established. The daily rate of benefit and days authorized are punched at the time the benefit year is established and the days benefit paid are obtained and punched either when the benefit year terminates or at the end of the calendar year in the case of those still in existence at December 31st. Amount of benefit paid is then estimated by sorting the punch cards and obtaining a tabulator total for days paid at each daily rate. This estimate will never agree exactly with the actual amount out of the unemployment insurance fund since the daily rate of benefit for some claimants will change during the life of the benefit year as the claimant gains or loses a dependent within the meaning of the Act. Since many of these changes are compensatory, however, the difference due to this factor should be negligible. As a matter of fact, benefit payments in 1947 amounted to \$32,039,340 according to the monthly statements from the Treasury Offices and \$31,156,965 as estimated from the punch cards and shown in Table 3. The difference between these two figures is 2.8 percent, which is a negligible difference for all practical purposes. The method used in Table 3 is the only means available for obtaining the days benefit paid and amount of benefit paid by sex and, if needed, by age, dependency status and other factors.

Persons with benefit years current during 1947 are classified, in Table 4, according to whether or not they have a dependent within the meaning of the Act at the time the benefit year was established. Since a person's status with respect to dependents is subject to change over time, it is felt that satisfactory results are obtained by recording the status in this manner. The status of those who established more than one benefit year during 1947 is determined at the time the first benefit year came into being.

In Tables 5 and 6 persons with benefit years current during 1947 and the benefit days paid to them are classified according to number of benefit days paid, sex and province. Of the 388,568 males and 123,623 females with benefit years current in 1947, 174,299 males, 45 percent, and 54,167 females, 44 percent, drew no benefit. The largest class of males and females drew from 5-9 days benefit and the second largest class drew from 1 to 4 days. Thus 55 percent of the males and 52 percent of the females were paid either no benefit or less than 10 days. In 1946, 27 percent of the males and 31 percent of the females drew no benefit and 35 percent of the males and 39 percent of the females drew either no benefit or less than 10 days.

Those who drew benefit in 1947 and the benefit days paid to them are classified in Tables 7 and 8 by daily rate of benefit, sex and dependency status, for the provinces. The daily rate of benefit is determined by the daily average contribution paid on behalf of an insured person during the two years immediately preceding the date of his claim and on whether or not he has a dependent as defined in the Act. The insured person's share of the daily contribution amounts to 1.5, 2.0, 2.5, 3.0,

3.5, 4.0, 5.0, or 6.0 cents according to his earnings. His daily average contribution over the two-year period is multiplied by 34 if he has no dependent or by 40 if he has a dependent, to determine his daily rate of benefit. For example, a claimant who has contributed at the rate of 6.0 cents a day and has a dependent would be entitled to benefit at the rate of \$2.40 a day and, from the schedule of contributions given in the Act, it is known that his weekly earnings during the two-year period have amounted to \$26 or more. Since a person's earnings often fluctuate over a period, the daily average contribution need not correspond with any one of the schedule rates.

Table 7 shows that during 1947 the majority (57 percent) of male beneficiaries having a dependent were paid benefit at the maximum rate of \$2.40 a day while 50 percent of males without a dependent were paid at a rate falling between \$2.00 and \$2.09 (the maximum of those without a dependent being \$2.05) indicating average weekly earnings of \$26 or more. At the same time 94 percent of males with dependents were paid \$2.00 or more a day and 79 percent of males without a dependent received \$1.70 or more a day, indicating in each case average weekly earnings of \$20 or more.

A much lower proportion of female than of male beneficiaries is paid at the higher benefit rates. This is due partly to the fact that only a small proportion of female beneficiaries (5 percent) is paid at the rate for those having a dependent but lower average weekly earnings for females are also indicated. For example, 10 percent of females having a dependent and 9 percent with no dependent were paid at the maximum rates of \$2.40 and \$2.00-\$2.09, although an additional 19 percent of those with a dependent were paid from \$2.10 to \$2.39 and so must have had earnings of \$26 a week or more for part of the two-year period. But more females without a dependent (17 percent) were paid at rates between \$1.30 and \$1.39 as at those between \$2.00 and \$2.09 (9 percent) and other groups were significantly large, such as that paid between \$1.20-\$1.29 (10 percent), \$1.40-\$1.49 (10 percent), \$1.50-\$1.59 (9 percent), \$1.60-\$1.69 (9 percent) and \$1.70-\$1.79 (14 percent). One reason for these lower earnings is apparent in Table 9 where the generally younger ages of females who established benefit years is evident.

Tables 9-16 include only those persons who established benefit years during the calendar year 1947 and the benefit days paid on those benefit years during that calendar year. Persons who established benefit years and the benefit days paid are classified in Tables 9 and 10 by age group, in Table II and 12 by industry and age, and in Tables 13 and 14 by industry and province, in the same categories as given in Tables B and C for the insured population. In Tables 15 and 16 the persons who established benefit years and the benefit days paid on them during 1947 are classified by occupation, sex and province, being classified on the same basis used for the insured population in Table A.

Tables 17-19 are concerned with the benefit years that terminated in 1947. A benefit year terminates either twelve months after it was established or when the benefit rights available have been exhausted, whichever occurs first. In the former case the benefit year is said to terminate by lapsing and in the latter case by exhaustion. Benefit years terminated during 1947 are classified, in Table 17, by number of benefit days authorized and benefit days paid. This gives an indication of the extent to which the authorized benefit rights were utilized at the time of termination. In Table 18 the benefit years terminated are classified by daily rate of benefit, number of benefit days paid, sex and dependency status. Total benefit years terminated and those terminated by exhaustion are classified in Table 19 by age group and sex.

Table A. - Number of Persons Issued an Unemployment Insurance Book,
April 1, 1947, Classified by Occupation, Sex and Province.

Based on 10% Sample

PRELIMINARY REPORT ON BENEFIT YEARS ESTABLISHED AND BENEFIT YEARS TERMINATED
UNDER THE UNEMPLOYMENT INSURANCE ACT, CALENDAR YEAR 1948.

The basic data for this report are supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices. From daily reports of benefit years established and monthly reports of benefit years terminated, monthly tabulations are prepared for distribution to a number of government officials concerned with the administration of the Unemployment Insurance Act. This report is a summary of the twelve monthly tabulations for the year 1948, and thus may be of interest to a wider group. The material in the report is preliminary and subject to revision when more complete information as to benefit years established, benefit years terminated and benefit days paid on each benefit year, is assembled and prepared for final tabulation. Past experience indicates, however, that the adjustments are likely to be of minor significance.

A benefit year is established when an insured person, on becoming unemployed, makes application for benefit and satisfies the following statutory conditions :

- (1) - That contributions have been paid on his behalf for not less than 180 days during the two years immediately preceding the commencement of the benefit year, and in the case of each benefit year except his first, for not less than 60 days since the commencement of his immediately preceding benefit year.
- (2) - That not more than half of the contributions paid on his behalf during the year immediately preceding the day on which the benefit year commences were made at the lowest Schedule rate (Class "O").
- (3) - That he has made a claim for benefit in the prescribed manner.
- (4) - That he is at least sixteen years of age.

When a benefit year is established the rate and duration of benefit to which the claimant is entitled are calculated from his contribution and benefit records. The number of benefit days authorized is based on the number of days for which contributions have been made during the preceding five years and the number of benefit days paid to him during the preceding three years. The daily rate of benefit is calculated from the claimant's daily average contribution during the preceding two years and upon whether or not he has a dependent within the meaning of the Act (effective October 4, 1948, the daily rate is based on the daily average of the most recent 180 days' contribution during the two years immediately preceding the date of the claim). Before October 4, 1948, the daily rate was 34 times this daily average contribution in the case of a person without a dependent, and 40 times the daily average contribution for a person with one or more dependents. Since October 4, 1948, the daily rate of benefit for a claimant having a

dependent is obtained by multiplying the daily average of the most recent 180 days' contributions during the two-year period by forty-five and deducting ten cents from the product so obtained. A new contribution class, for persons earning thirty-four dollars or more in a week, was established at the same time with increased contribution and benefit rates. The full effect of this last amendment to the Act will not, however, be apparent until May 1949.

The fact that a benefit year is established does not necessarily mean that the claimant draws benefit. During each period of unemployment in the course of the benefit year, the claimant must prove that he is unemployed, capable of and available for work, and unable to obtain suitable employment. The following examples are offered by way of illustration: A claimant is disqualified from receiving benefit during a period of illness or while on voluntary vacation, or while receiving an amount substantially equivalent to his earnings as payment in lieu of notice. A claimant is subject to disqualification for a period not exceeding six weeks if he lost his employment by reason of his own misconduct, left his employment without just cause, refused an offer of suitable employment, etc. The Unemployment Insurance Act provides compensation in cases of involuntary unemployment for those who have a sufficient number of recent contributions to their credit to establish their continued interest in employment.

Many persons who satisfy all these conditions and are eligible to draw benefit become re-employed before any benefit is payable. The first nine days in any benefit year are not compensated since this is a "waiting period", nor is the first day of unemployment in any week unless it forms part of or immediately follows a full week of continuous unemployment.

Once a benefit year is established the benefit rights authorized may be drawn during one or more periods of unemployment, providing that during each the claimant proves that he is "capable of and available for work". If all the benefit days authorized are drawn the benefit year terminates by exhaustion, if not, the benefit year automatically terminates (lapses) twelve months after the date on which it was established. When a person's benefit year terminates for any reason he may immediately establish another if he can fulfil the statutory conditions.

Some of the benefit years established may have been second benefit years established by the same persons. Similarly a person may have more than one benefit year terminate during a calendar year. Hence each benefit year included in these tables does not represent a separate claimant.

Tables 1 to 4 in this report classify, by sex and province, the number of benefit years established during 1948, by age group (Table 1), daily rate (Table 2), occupation (Table 3) and industry (Table 4).

Table 5 gives a breakdown by sex, of benefit years terminated (exhausted and lapsed) showing the duration of benefit days authorized classified by the number of benefit days actually paid. Table 6 shows the number of benefit years terminated classified by cause of termination, sex and province.

Tables 7 to 10 present, by sex and province, benefit years exhausted, classified by age group, daily rate, industry and occupation.

This report was prepared for publication by Miss Mary George of the Unemployment Insurance Section of the Dominion Bureau of Statistics.

ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED AND TERMINATED UNDER
THE UNEMPLOYMENT INSURANCE ACT - 1949.

This is the final statistical report dealing with benefit years established and benefit years terminated during the calendar year 1949. The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

Part 1 - The Insured Population.

With a social insurance system such as the Canadian Unemployment Insurance Act which excludes from coverage certain classes of employees, it is a difficult matter to define precisely the insured population. At any given moment of time a person can be classed as coming within the purview of the Act as either a contributor or a claimant and another can be said to be outside its jurisdiction. But individuals are mobile and as they change their jobs or their circumstances, many move into and out of insured status. Thus some 3,500,000 insurance books are issued during a year although, at April 1, 1949, there were some 2,600,000 persons "actively" insured (i.e. contributors and claimants).

The data on the insured population presented in Tables A, B and C are obtained from returns in connection with the renewal of insurance books and contribution cards at April 1. Included in the figures are those who were employed in insurable employment at that time and whose books or cards were therefore renewed through employers, as well as those on claim whose books were renewed at their first visit to a local office after April 1. The tables are based upon a 10 p.c. sample of renewals (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers should be used with caution since they are likely to be affected by relatively large sampling variation. In all cases groups containing less than an estimated 100 persons (10 cases in the sample) are indicated by an asterisk so that the sum of the figures appearing under any heading does not necessarily agree with the total shown for that category.

Data on the insured population provide a base in terms of which the magnitudes contained in the body of the report concerning benefit years established and benefit years terminated can be related. Table A which distributes insured persons by occupation, sex and province is directly comparable with Table 3 for benefit years established and Tables 20 and 21 for benefit years terminated. Similarly Table B lines up with Tables 8, 24 and 25; while Table C is related to Tables 7, 22 and 23. At the same time the incidence of benefit years established or benefit days paid derived from these tables should be used with caution. The occupations and industries recorded in Tables A, B and C are those in which insured persons were engaged at April 1st whereas those indicated in Tables 3, 7, 8, and 20-25 relate to the

last job held by each claimant at the time of claim. Thus each must be taken as merely an approximation to the "usual" employment characteristics of the group covered and it cannot be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the occupation or industry indicated by his last job. Nevertheless the general occupational, industrial, and age patterns of the insured population, when compared with those of persons establishing benefit years and of benefit days paid, reveal some significant concentrations that are related to known seasonal shifts in employment.

Part 11 - Benefit Years Established and Terminated.

Newfoundland became part of Canada on April 1, 1949. Since 180 days' contributions within the past two years are required to establish a benefit year, the bulk of the insured population in Newfoundland could not qualify until about November 1949. This explains the relatively small numbers of claimants in Newfoundland as shown in the following tables. Those shown as having benefit years terminated in Newfoundland in 1949 must have had previous contributions while employed elsewhere in Canada or contribution credits because of wartime service in the armed forces.

To assist in the interpretation of the following tables it is well to consider briefly the nature of a benefit year and the conditions under which one is established and terminated. The benefit year is a device for establishing, at any given time, the number of days and daily rate of benefit (if any) to which a claimant is entitled so long as he satisfies the provisions of the Act regarding payment of benefit. A claimant's right to establish any benefit entitlement depends upon proof of recent significant attachment to insured employment, attaining normal working age, and having past contributions signifying more than insignificant earnings in insurable employment. Thus, in 1949, to establish a benefit year a claimant had to satisfy the following statutory conditions:

1. That contributions had been paid in respect of him while employed in insurable employment
 - (1) in the case of each benefit year for not less than one hundred and eighty days during the two years immediately preceding the day on which the benefit year commences; and
 - (2) in the case of each benefit year except his first, for not less than sixty days since the commencement of his immediately preceding benefit year;
2. That, of the contributions made in respect of him while engaged in insurable employment during the year immediately preceding the day on which the benefit year commences not more than half were

made at the lowest rate of contribution specified in the schedule of contributions;

3. That he has made a claim for benefit in the prescribed manner; and
4. That he is at least sixteen years of age.

A claimant, then, having satisfied the above statutory conditions, has a benefit year established. The benefit year remains in existence until either twelve months have elapsed or the benefit rights available have been exhausted, whichever occurs first. For each benefit year established the duration of benefit authorized is computed on the basis of the number of days contributed during the immediately preceding five years and days benefit drawn in the immediately preceding three years; while the daily rate of benefit is determined from the daily average of the claimant's most recent one hundred and eighty daily contributions and on whether or not the claimant has a dependent within the meaning of the Act. The establishment of a benefit year for a claimant does not mean that he is entitled to draw benefit immediately. It merely means that he has considered himself to be unemployed, has made application and has fulfilled the minimum requirements of the Act for the establishing of benefit rights (the above four statutory conditions).

The basic statutory conditions have to be proven only once in each benefit year. When a benefit year has been established, the benefit rights authorized may be drawn upon during successive periods of unemployment until the benefit year is terminated (either through exhaustion or lapsing). Upon termination of one benefit year a claimant may establish another immediately if he can fulfill the four basic statutory conditions.

Entitlement to benefit payments at any time depends, however, upon other circumstances. The first nine days of proven unemployment in any benefit year are not compensated; and the first day of proven unemployment in a claim week is not compensated unless it immediately follows or forms part of a full week of proven unemployment. In addition, to be eligible for benefit the claimant must declare periodically that he is unemployed, capable of and available for work and unable to obtain suitable employment. A claimant is considered unemployed if he has become separated from his employment, been temporarily laid off, or put on short time; but is not considered unemployed on any day for which a contribution is payable, during any period for which he has received dismissal pay or payment in lieu of notice, or (even though separated from his major employment) if he earns more than an average of one dollar and fifty cents a day in some subsidiary employment.

During a period such as illness or vacation a claimant is considered not capable of or not available for employment. Voluntarily

leaving the former employment without just cause, discharge on account of his own misconduct, refusal of an offer of suitable employment, or neglecting to avail himself of an opportunity to work at suitable employment, render the claimant subject to disqualification from benefit for a period not exceeding six weeks. Such a period is considered to be voluntary unemployment.

Significant attachment to the insured working force is indicated by the claimant's past contribution record and his age. Thus the requirement that at least one hundred and eighty days' contributions must have been recorded within the past two years, at least sixty of these since the commencement of the immediately preceding benefit year, not more than half of those recorded in the past year at the lowest schedule rate, and that the claimant be over sixteen years of age. In addition, benefit cannot be paid to any person: while he is an inmate of an institution supported wholly or partly out of public funds, or while he is not residing in Canada (with some exceptions).

The above brief summary of the conditions surrounding the payment of benefit is intended merely as an aid to those intending to interpret and use the following tables and should not be considered exhaustive or strictly accurate (under some circumstances the time periods mentioned can be extended and the Commission is given power to make regulations covering some of the aspects of entitlement to benefit). For a complete and strictly accurate understanding of these conditions reference should be made to the Unemployment Insurance Act, 1940, as amended in October 1948 and the regulations passed by Order-in-Council under the authority of that statute.

In 1949 (see Table 1.) there were 564,950 benefit years established by 556,074 claimants (547,198 of whom established only one benefit year while 8,876 established two benefit years). The total of benefit days authorized in 1949 was 86,278,464 or an average of 153 per benefit year established. On the 410,820 benefit years terminated during 1949, benefit days paid totalled 24,660,099 or an average of 60 per benefit year terminated. (The corresponding average for those terminated by exhaustion was 103 days and for those terminated by lapsing 48 days - see Tables 11 and 12). In general, then, the benefit rights available to claimants in 1949 were more than adequate to meet the demands on them.

Tables 2 to 8 are concerned with the persons who established benefit years and present data on their personal and employment characteristics. In Table 2 those who established benefit years in 1949 are classified by province, sex and whether or not they were regarded as having a dependent within the meaning of the Act. About 54 p.c. of males and 6 p.c. of females were considered to have a dependent and therefore had benefit rights established at the higher scale of benefit rates.

The occupational distribution of those who established benefit

rights is given in Table 3. The occupation followed in the most recent job held is recorded when the claim is filed and it should be emphasized again that this is not necessarily the usual occupation of an individual. Those who established more than one benefit year in the calendar year are recorded here in the occupation followed in the most recent job held prior to establishing the first benefit year.

Table 4 classifies the persons who established benefit years by daily rate of benefit authorized, sex, dependency status and province. About 34 p.c. of males and 8 p.c. of females with a dependent had benefit rights established at the highest class of rates, \$3.00 and over, while 63 p.c. of males and 18 p.c. of females with a dependent are accounted for in the three highest classes, \$2.80 and over. At the same time the two largest groups of females having a dependent are found in the classes \$2.10 - \$2.19 (14 p.c.) and \$2.60 - \$2.69 (11 p.c.). For those without a dependent, about 16 p.c. of males are found in the highest class (\$2.40 - \$2.49) and almost the same number in each of the five classes from \$2.00 to \$2.49, which account in all for 80 p.c. of such males. The largest class of females with no dependent (17 p.c.) is found in the rate group \$1.70 - \$1.79 while almost as many (14 p.c.) are classed in the group \$2.00 - \$2.09. These distributions indicate the generally lower earnings of females than of males largely due to such factors as age and occupational and industrial attachment.

In Table 5 persons who established benefit years in 1949 are classified according to the number of benefit days authorized, sex and province. Except for the two classes containing those authorized less than 40 days the remaining groups, comprising 10-day intervals, display a remarkable degree of consistency in the numbers included. Ignoring the top class (300 days and over) the number of males included in any class from 40 to 299 days ranges between 12,472 (2.8 p.c. of all males) and 16,392 (3.7 p.c. of all males). The maximum authorization is 312 days and this requires five years of uninterrupted contributions immediately preceding the date of the claim. The small number of cases with less than 30 days authorized is made up of individuals with a consistent record of claims, while the comparatively large group having 30-39 days consists in part of those with a heavy claim record and in part of recent entrants to insured employment and "fringe" elements who work intermittently or seasonally in insured jobs. The pattern for females is almost identical with that described for males.

A distribution of persons who established benefit years in 1949 by age group, sex and province, is given in Table 6. The largest groups of males occur in the two quinquennial groupings 20-24 and 25-29 (comprising 17 p.c. and 15 p.c. respectively of all males) and there is then a progressive reduction in the numbers included in each 5 year group up to age 64. The age group 65 and over includes about 6.5 p.c. of all males establishing benefit rights. When this curve is compared with that

for the insured population as a whole some significant differences are apparent (see Table C). For example, in the insured population 7 p.c. of males are under 20 years of age and almost the same percentage of males who established benefit years are in this age group. The group 20-24, on the other hand, contains a higher percentage of males establishing benefit years than of insured males (17 p.c. of those who established benefit rights as against 15 p.c. of covered males). Males 25-29 years of age are represented proportionally to the same extent in the two series (15 p.c.) while in each of the quinquennial groups from age 30 to 59 males form a higher proportion of the insured population than of those establishing benefit years; the difference being greatest in the age group 35-39. For the group 60-64 males establishing benefit years are slightly more prevalent than in the insured population (4.7 p.c. as compared with 4.6 p.c.) but males at ages of 65 and over account for 6.5 p.c. of those establishing benefit years and only 4.3 p.c. of insured males.

The age composition of the female insured population is quite different from that of the male, some 69 p.c. of females being under 35 years of age with a heavy concentration in the age groups 16-19 (16 p.c.), 20-24 (26 p.c.) and 25-29 (17 p.c.). This naturally affects the distribution of females establishing benefit years but in general the same pattern of differences described above for males between the age composition of the group that established benefit rights and the population occurs for females. The proportion of females who established benefit years under 20 years of age is somewhat lower than in the population while those between 20 and 29 are more heavily concentrated in data on benefit years established. At ages from 30 to 49 there is a higher proportion of females in the population than among those establishing benefit rights. Females aged 50 and over comprise only 8 p.c. of insured females so differences in the proportional representation of the quinquennial groups do not involve large numbers. Yet it appears that at ages of 50 and over (compared with 60 and over for males) the proportion of females establishing benefit years tends to be greater than their relative importance in the insured population.

In Table 7 the persons who established benefit years during 1949 are classified by industry, sex and age. The industry recorded in each case is obtained from the nature of business of the most recent employer at the time the initial claim is filed. The contributions recorded in the preceding five years (the basis for calculating duration of benefit entitlement) have, in many cases, been made while the claimant was engaged in other employment. Thus the industry tables (Tables 7 and 8) signify only the industries in which claimants were employed immediately prior to the establishment of their benefit years.

Tables 9 - 25 are concerned with benefit years terminated in 1949 and therefore contain information on the number of days' benefit paid as well as the number of benefit years terminated. In Table 9 benefit

years terminated and the benefit days paid in them are classified by sex and province along with an estimate of the amount of benefit paid in these benefit years. The estimated dollar value of benefit paid is obtained by sorting the cards by province, sex, and daily rate of benefit and then obtaining a total of benefit days paid at each rate. This is the only means available for obtaining the amount of benefit paid by sex.

Table 10 presents benefit years terminated in 1949 and the benefit days paid in them by sex, dependency status and province. This permits the calculation of an average number of days paid for each category. The average is higher for females than for males and for those with a dependent than for those with none.

Tables 11 and 12 classify benefit years terminated and benefit days paid by cause of termination and by age and sex of the claimant. The average number of days benefit paid was 60 (58 for males and 66 for females). In the case of males the average number of days paid progressed fairly steadily with age (being 43 for those under 20 and 68 for those 55-59) but increased markedly for those 60 and over (being 83 for those 60-64 and 119 for those 65 and over). In the case of women, however, at all ages of 20 and over the average days paid are significantly higher than for men of the same age and the age group 25-29 (with 73 days against 47 for males of those ages) has a higher average number of days paid than any other group except those 50 and over. This phenomenon must be due in large measure to the influence of women who separate from their previous job because of marriage and who are difficult to place in suitable employment.

In Tables 13 and 14, benefit years terminated in 1949 are classified by daily rate of benefit, sex and dependency status. The daily rate used in each case is the one obtained at the time the benefit year was established (the majority of these benefit years were established in 1948) so the small number of cases with rates of \$2.70 and over are those established in May 1949 or later and terminated in that year. Increased benefit rates and a new higher contribution class came into effect in October 1948, resulting in benefit rates up to \$3.05 for those with a dependent by May 1949. At the same time the new contribution class resulted in a higher maximum benefit rate (\$2.40) for those with no dependent.

Tables 15 and 16 give benefit years terminated and benefit days paid by duration of benefit paid and sex. Table 16 is included only to provide actual total days paid in each case, although these could be estimated from Table 15. About 15 p.c. of males and 16 p.c. of females drew no benefit; 39 p.c. of males and 37 p.c. of females drew less than 30 days; and 53 p.c. of males and 51 p.c. of females drew less than 50 days.

In Table 17, benefit years terminated are classified by benefit days authorized and each group of days authorized distributed according to number of benefit days paid. This table indicates the extent to which those who established benefit years actually used their entitlements.

Tables 18 and 19 are concerned with benefit years terminated and the benefit days paid in them by age and sex for Canada and the Provinces. Average benefit days paid (58 for males and 66 for females) varied considerably by age as already mentioned in connection with Tables 11 and 12 where these data are presented by age and cause of termination.

Tables 20-25 classify benefit years terminated and benefit days paid by occupation and industry. As already pointed out with regard to Tables 3, 7 and 8, the occupation and industry taken for each claimant are those pertaining to his most recent job at the time his initial claim is filed. It is not known to what extent the past contributions used in determining his benefit entitlement were paid while in that job.

Table A. - Number of Persons Issued an Unemployment Insurance Book, April 1, 1949,

Classified by Occupation, Sex and Province.

Based on 10% Sample

Occupation and Sex		CANADA	New-found-land	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

(1) Unemployed												
	Male	38,710	4,620	*	1,050	1,510	8,560	15,900	1,490	570	1,130	3,790
	Female	12,170	220	*	450	560	3,340	5,390	750	130	220	1,090

(1) - The unemployed for whom an occupation was specified have been included in the appropriate occupation group. Thus the total unemployed as given in this table is less than that in the industry table by 190,850.

Asterisks indicate less than an estimated 100 persons

Classified by Industry, Sex and Province.

Based on 10% Sample

ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED AND TERMINATED
UNDER THE UNEMPLOYMENT INSURANCE ACT - 1950.

This is the final statistical report dealing with benefit years established and benefit years terminated during the calendar year 1950. The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

Part 1 - The Insured Population.

With a social insurance system such as the Canadian Unemployment Insurance Act which excludes from coverage certain classes of employees, it is a difficult matter to define precisely the insured population. At any given moment of time a person can be classed as coming within the purview of the Act as either a contributor or a claimant and another can be said to be outside its jurisdiction. But individuals are mobile and, as they change their jobs or their circumstances, many move into and out of insured status. Thus more than 4,000,000 insurance books are issued during a year although, at April 1, 1950, there were some 2,600,000 persons "actively" insured (i.e. contributors and claimants).

The data on the insured population presented in Tables A, B and C are obtained from returns in connection with the renewal of insurance books and contribution cards at April 1. Included in the figures are those who were employed in insurable employment at that time and whose books or cards were therefore renewed through employers, as well as those on claim whose books were renewed at their first visit to a local office after April 1. The tables are based upon a 10 p.c. sample of renewals (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers should be used with caution since they are likely to be affected by relatively large sampling variation. In all cases groups containing less than an estimated 100 persons (10 cases in the sample) are indicated by an asterisk so that the sum of the figures appearing under any heading does not necessarily agree with the total shown for that category.

Data on the insured population provide a base in terms of which the magnitudes contained in the body of the report concerning benefit years established and benefit years terminated can be related. Table A which distributes insured persons by occupation, sex and province is directly comparable with Table 4 for benefit years established and Tables 20 and 21 for benefit years terminated. Similarly Table B lines up with Tables 9, 24 and 25; while Table C is related to Tables 8, 22 and 23. At the same time the incidence of benefit years established or benefit days paid derived from these tables should be used with caution. The occupations and industries recorded in Tables A, B and C are those in which insured persons were engaged at April 1 whereas those indicated in Tables 4, 8, 9, and 20-25 relate to the

last job held by each claimant at the time of claim. Thus each must be taken as merely an approximation to the "usual" employment characteristics of the group covered and it cannot be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the occupation or industry indicated by his last job. Nevertheless the general occupational, industrial, and age patterns of the insured population, when compared with those of persons establishing benefit years and of benefit days paid, reveal some significant concentrations that are related to known seasonal shifts in employment.

Part 11 - Benefit Years Established and Terminated.

Newfoundland became a province of Canada on April 1, 1949. Since 180 days' contributions within the past two years are required to establish a benefit year, none could have been established earlier than November 1949 on contributions made while employed in Newfoundland. Those subject to interruption of insured employment and those who came into insured employment during certain seasons would take longer to accumulate the minimum contributions required. The relatively recent entry of the bulk of the insured population in Newfoundland explains in part at least the comparatively small number of benefit years established in that province during 1950. Benefit years terminated in 1950 are largely those established in 1949 and therefore they are even more affected by the recent entry of Newfoundland.

To assist in the interpretation of the following tables it is well to consider briefly the nature of a benefit year and the conditions under which one is established and terminated. The benefit year is a device for establishing, at any given time, the number of days and daily rate of benefit (if any) to which a claimant is entitled so long as he satisfies the provisions of the Act regarding payment of benefit. A claimant's right to establish any benefit entitlement depends upon proof of recent significant attachment to insured employment, and having past contributions signifying more than insignificant earnings in insurable employment. Thus, in 1950, to establish a benefit year a claimant had to satisfy the following conditions (called statutory conditions):

- That contributions had been paid in respect of him while employed in insurable employment
- (a) - for not less than 180 days during the two years immediately preceding the day on which the benefit year commences; and
 - (b) - for either not less than 60 days during the 52 weeks, or not less than 45 days during the 26 weeks, immediately preceding the commencement of the benefit year, or during the period since the commencement of the immediately preceding benefit year, if any, whichever period is less.*

* - The conditions as outlined here became effective on July 3, 1950. During the first six months of that year the statutory conditions were as described on page 2 of the 1949 bulletin in this series.

A claimant, then, having satisfied the above conditions, has a benefit year established. The benefit year remains in existence until either twelve months have elapsed or the benefit rights available have been exhausted, whichever occurs first. For each benefit year established the duration of benefit authorized is computed on the basis of the number of days contributed during the immediately preceding five years and days benefit drawn in the immediately preceding three years; while the daily rate of benefit is determined from the daily average of the claimant's most recent one hundred and eighty daily contributions and on whether or not the claimant has a dependent within the meaning of the Act. The establishment of a benefit year for a claimant does not mean that he is entitled to draw benefit immediately. It merely means that he has made application in the prescribed manner and has fulfilled the minimum requirements of the Act for the establishing of benefit rights (the above statutory conditions).

The basic statutory conditions have to be proven only once in each benefit year. When a benefit year has been established, the benefit rights authorized may be drawn upon during successive periods of eligibility until the benefit year is terminated (either through exhaustion or lapsing). Upon termination of one benefit year a claimant may establish another immediately if he can fulfill the basic statutory conditions.

Entitlement to benefit payments at any time depends, however, upon other circumstances. The first eight days of proven unemployment in any benefit year are not compensated ("waiting days"); and the first day in any period of proven unemployment is not compensated except that only one such day is excluded in any claim week and benefit is paid for the first day following an interruption of a period of proven unemployment by employment not exceeding three consecutive days in duration. In addition, to be eligible for benefit the claimant must declare periodically that he is unemployed, capable of and available for work and unable to obtain suitable employment. A claimant is deemed to be unemployed if he has become separated from his employment, been temporarily laid off, or put on short time; but is not considered unemployed on any day for which a contribution is payable, during any period for which he has received dismissal pay or payment in lieu of notice, or (even though separated from his major employment) if he earns more than an average of two dollars a day in some subsidiary employment.

During a period such as illness or vacation a claimant is considered not capable of or not available for employment. Voluntarily leaving the former employment without just cause, discharge on account of his own misconduct, refusal of an offer of suitable employment, or neglecting to avail himself of an opportunity to work at suitable employment, render the claimant subject to disqualification from benefit for a period not exceeding six weeks. Such a period is considered to be voluntary unemployment.

Significant attachment to the insured working force is indicated by the claimant's past contribution record. Thus the requirement that at least one hundred and eighty days' contributions must have been recorded within the past two years and at least sixty of these during the past year (or alternatively forty-five during the past six months) or since the commencement of the immediately preceding benefit year. In addition,

benefit cannot be paid to any person: while he is an inmate of an institution supported wholly or partly out of public funds, or while he is not residing in Canada (with some exceptions).

The above brief summary of the conditions surrounding the payment of benefit is intended merely as an aid to those intending to interpret and use the following tables and should not be considered exhaustive or strictly accurate (under some circumstances the time periods mentioned can be extended and the Commission is given power to make regulations covering some of the aspects of entitlement to benefit). For a complete and strictly accurate understanding of these conditions reference should be made to the Unemployment Insurance Act, 1940, as amended in February 1950 and the regulations passed by Order-in-Council under the authority of that statute.

In 1950 (see Table 1) there were 602,742 benefit years established by 593,349 claimants (583,985 of whom established only one benefit year, 9,335 established two benefit years and 29 established three benefit years). Total benefit days authorized in 1950 amounted to 97,559,753 or an average of 162 days per benefit year. On the 578,111 benefit years terminated in 1950 benefit days paid totalled 37,857,540, or an average of 65 per benefit year terminated; the corresponding average for those terminated by exhaustion being 99 days and for those terminated by lapsing being 53 days - (see Tables 12 and 13).

Tables 2 to 9 are concerned with the persons who established benefit years and present data on their personal and employment characteristics. In Table 2 those who established benefit years in 1950 are classified by province, sex and whether or not they proved that they had a dependent within the meaning of the Act. In Canada as a whole about 58 p.c. of males and 7 p.c. of females who established benefit years were classed as having a dependent. Provincially, however, there was considerable variation, the percentage of males with dependents ranging from 76 in Newfoundland to 56 in Ontario and Alberta, while for females it ranged from 20 in Newfoundland to 6 in Quebec.

The marital status of persons who established benefit years is given in Table 3 by sex and province. For all Canada about 59 p.c. of the males who established benefit years were married and 35 p.c. were single. Except for Newfoundland (where the numbers involved are very small) these percentages vary little between provinces, although there is a somewhat higher proportion of married men in Nova Scotia and New Brunswick (about 66 p.c. married and 29 p.c. single). In the case of females, however, a different situation is evident. Married females represented the largest marital status group (44 p.c.) among females who established benefit years, slightly larger than single females (43 p.c.), while widows and separated females accounted for 5 p.c. and 6 p.c. respectively, of the total (in 2 p.c. of cases the marital status was not given). For the province of Quebec and those to the East, however, single women outnumbered married women among those who established benefit years, while in Ontario and the western provinces the opposite situation prevailed. The highest proportion of married women was found in British Columbia (55 p.c. married, 30 p.c. single) followed by Ontario (52 p.c. married, 33 p.c. single), Manitoba (52 p.c. married, 35 p.c. single)

Saskatchewan (47 p.c. married, 40 p.c. single) and Alberta (47 p.c. married, 38 p.c. single).

In Table 4 the occupational distribution of those who established benefit rights in 1950 is given. The occupation recorded in each case is that followed in the most recent job held at the time the claim was filed. It should be emphasized again that the occupation given is not necessarily the individual's usual occupation or the one in which past contributions were paid. For those who established more than one benefit year during the calendar year the occupation tabulated is that followed in the most recent job held prior to the establishment of the first such benefit year.

Those who established benefit years in 1950 are classified by daily rate of benefit, sex and dependency status in Table 5. The highest class of rates (\$3.00 and over) contains 73 p.c. of males and 16 p.c. of females who had a dependent. The largest numbers of females with a dependent occur in the rate classes \$2.10 - \$2.19 (21 p.c.) and \$2.60 - \$2.69 (17 p.c.). Of those without a dependent 47 p.c. of males and 10 p.c. of females are found in the highest class, \$2.40 - \$2.49, and significant groups of females established benefit rights in rate classes \$1.30 - \$1.39 (14 p.c.), \$1.70 - \$1.79 (25 p.c.) \$2.00 - \$2.09 (19 p.c.).

Table 6 classifies those who established benefit years in 1950 according to number of benefit days authorized, by sex and province. For Canada, when the cases are grouped by 10-day intervals the group totals are remarkably consistent. Excepting the group 29 days and less, no class of males contains less than 3.2 p.c. or more than 4.3 p.c. of all males; while for females the groups range from 2.9 p.c. to 5.0 p.c. of the total. Authorization of less than 36 days is exceptional and indicates almost continuous beneficiary status for a comparatively long period.

A distribution of persons who established benefit years in 1950 by age group, sex and province, is given in Table 7. The largest group of both males and females is the age group 20-24, containing 16 p.c. of males and 27 p.c. of females who established benefit years. The pattern by age is essentially the same as in previous years, the youngest age groups (under 20) having relatively few claimants while the age groups 65 and over have a relatively high proportion of claimants. In the case of females there is some concentration of claimants at ages 20 - 29, while females aged 30 to 49 are about the same proportion of those who established benefit rights as of the insured population. A relatively high proportion of females aged 50 and over in the insured group established benefit years but the number of such cases is small.

In Table 8 the persons who established benefit years in 1950 are classified by industry, age and sex, while in Table 9 they are shown by industry, province and sex. The industry recorded in each case for the purpose of this distribution is the one in which the person was engaged on his most recent job at the time his initial claim was filed. This may or may not be the industry in which the majority of his contributions were recorded.

Tables 10 to 25 are concerned with benefit years terminated during 1950 and therefore contain information on the number of benefit days paid as well as the number of benefit years terminated. The number of benefit years terminated, benefit days paid, and estimated amount of benefit paid in those benefit years, are classified by province and sex in Table 10. The dollar estimate of benefit payments is obtained from the daily rate of benefit and number of days paid. This is the only means available for obtaining the amount of benefit paid by sex.

Table 11 shows benefit years terminated and benefit days paid by province and sex separately for those with and without a dependent. For Canada, males with a dependent were paid more benefit days on the average (66 days) than those without a dependent (60 days) while females without a dependent were paid more days on the average (74 days) than those with a dependent (71 days).

The number of benefit years terminated in 1950 and benefit days paid on them are classified in Tables 12 and 13 by age group, cause of termination and sex. The average number of days benefit paid was 65 (63 for males and 74 for females). In the case of males the average number of days paid progressed fairly steadily with age up to age 59 (being 45 days for those under 20 and 72 days for those 55 - 59) but then increased sharply for those 60 and over (being 86 days for those 60-64, 123 days for those 65-69, and 134 days for those 70 and over). At all ages over 20, females drew significantly more benefit days than males. This was particularly true for age groups 25-29 where the female average was 83 days compared with 54 for males.

Tables 14 and 15 classify benefit years terminated in 1950 and the benefit days paid on them by daily rate of benefit, sex and dependency status. The daily rate and dependency status used in each case apply to the circumstances existing at the time the benefit year was established.

Benefit years terminated in 1950 are classified in Table 16 by number of benefit days paid. About 12 p.c. of both males and females who had established benefit years drew no benefit; 25 p.c. of males and 21 p.c. of females, who drew benefit, drew less than 30 days; 62 p.c. of males and 57 p.c. of females who drew benefit drew less than 75 days.

In Table 17 benefit years terminated in 1950 are classified by benefit days authorized, each group of days authorized then being distributed by number of benefit days paid. This table indicates the extent to which groups of beneficiaries actually used their days of entitlement.

Tables 18 and 19 classify benefit years terminated and the benefit days paid on them by age group, province and sex. Average benefit days paid (63 for males and 74 for females of all age groups) varied significantly by age as already indicated by Tables 12 and 13. These tables show that substantially the same condition existed in all provinces.

Tables 20 to 25 classify benefit years terminated in 1950 and benefit days paid on them by occupation and industry. As already pointed out in connection with Tables 4, 8 and 9, the occupation and industry taken for each claimant are those pertaining to his most recent job at the time his initial claim is filed. It is not known to what extent the job recorded is the one in which the majority of past contributions have been made.

Table A. - Number of Persons Issued an Unemployment Insurance Book, April 1, 1950,

Classified by Occupation, Sex and Province.

Based on 10% Sample

Occupation Group and Sex		CANADA	New-found-land	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia

(1) - The claimants for whom an occupation was specified have been included in the appropriate occupation group. Thus the total claimants as given in this table is less than that in the industry table by 149,000.

* Indicates less than an estimated 100 persons.

Indicates no one reported in the category.

BENEFIT RIGHTS ESTABLISHED UNDER THE
SUPPLEMENTARY BENEFIT PROVISIONS OF
THE UNEMPLOYMENT INSURANCE ACT.

February 28 - April 15, 1950

The supplementary benefit provisions of the Unemployment Insurance Act provide for specified benefit rights, to certain classes of claimants unable to satisfy the minimum contribution requirements for regular benefit, during the winter months. The plan came into operation through an amendment to the Unemployment Insurance Act in February 1950. This report provides statistical material on cases of benefit entitlement and benefit days paid during the initial period, February 28 - April 15, 1950.

Supplementary benefit is made available during the operative period to the following four classes of claimants, provided they meet all the requirements necessary for the payment of regular benefit except that the contribution requirements are relaxed as specified in each case :

- Class 1. - A person whose benefit year has terminated since the 31st day of March immediately preceding the day on which he makes a claim for supplementary benefit.
- Class 2. - A person who failed to fulfill the statutory conditions on a claim filed since the preceding 31st day of March if contributions were paid in respect of him for not less than 90 days since that date.
- Class 3. - A person who was employed in lumbering and logging other than in the province of British Columbia or in lumbering and logging (except in British Columbia) and any insurable employment for not less than 90 days in any consecutive twelve-month period within the eighteen months preceding the date on which he makes a claim for supplementary benefit.
- Class 4. - A person who, for not less than 90 days subsequent to the preceding 31st of March, was employed in an employment which was made insurable in the year preceding the date of claim, or in employment that became insurable in that year and any other insurable employment.

The number of benefit days authorized is calculated as follows :

- Class 1. - The same number of days to which he was entitled on his most recently established benefit year.
- Class 2. - One-fifth of the number of days for which he has made contribution since the immediately preceding March 31st.
- Class 3. - One-fifth of the number of days for which he was employed in lumbering and logging and in any insurable employment during the specified twelve-month period.
- Class 4. - One-fifth of the number of days for which he was employed in employment that was made insurable and in other insurable employment, since the immediately preceding March 31st.

The period for which supplementary benefit was payable, in 1950, was, however, from February 28 to April 15, (a maximum of 41 days) and the days authorized in each case could not exceed the number of possible benefit days between the date of entitlement and April 15. Any day of proven unemployment within the thirty days immediately preceding the supplementary benefit period may be substituted for any of the "waiting days" required under the Act.

The daily rate of supplementary benefit is 80 per cent of the regular benefit rate and is calculated on the same basis. For persons in classes 3 and 4, the contribution rates used are those which would have been paid by them if lumbering, etc., had been insurable.

Moneys are provided by Parliament from time to time to reimburse the Unemployment Insurance Fund for benefit payments made to Classes 3 and 4. Provision is also made for Parliament to vote money to reimburse the Fund for any excess in benefit payments to Classes 1 and 2 over revenue from the additional contributions of employers, employees and the Government which was levied for the purpose of paying supplementary benefit to these classes. (The amendment of February 1950 provided for an additional 1 cent each on the daily contributions of employers and employees, to which the Government adds one-fifth in accordance with the contribution provisions of the Act).

ANNUAL REPORT ON BENEFIT YEARS ESTABLISHED AND
TERMINATED UNDER THE UNEMPLOYMENT INSURANCE ACT

1951.

This is the final statistical report dealing with benefit years established and benefit years terminated during the calendar year 1951. The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

Part 1. - The Insured Population.

The insured population changes in size from time to time during the course of a year as individuals enter and leave insured employment seasonally and otherwise. The insured population for which data are presented here (Tables A, B and C) consists of persons for whom unemployment insurance books or contribution cards were renewed at April 1st and new entrants to insured employment in April 1951. The bulk of such persons were contributing and had books renewed through an employer, but some were claiming unemployment insurance benefit and had their books renewed when they called at a local office. Persons in these two categories at April 1, 1951, numbered about 3,000,000 compared with about 4,200,000 persons to whom books had been issued at some time during the year ending March 31, 1951.

The tables referred to above are based on a 10 percent sample of renewals and new entrants during the month of April, (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers should be used with caution since they are likely to be affected by relatively large sampling variation. In all cases groups containing less than an estimated 100 persons (10 cases in the sample) are indicated by an asterisk so that the sum of the figures appearing under any heading does not necessarily agree with the total shown for that category.

Data on the insured population provide a base in terms of which the magnitudes contained in the body of the report concerning benefit years established and benefit years terminated can be related. Table A which distributes insured persons by occupation, sex and province is directly comparable with Table 4 for benefit years established and Tables 20 and 21 for benefit years terminated. Similarly Table B lines up with Tables 9, 24 and 25 while Table C is related to Tables 8, 22 and 23. At the same time, the incidence of benefit years established or benefit days paid derived from these tables should be used with caution. The occupations and industries recorded in Tables A, B and C are those in which insured persons were engaged at April 1st, whereas those indicated in Tables 4, 8, 9 and 20-25 relate to the last job held by each claimant at the time of the claim. Thus each must be taken as merely an

approximation to the "usual" employment characteristics of the group covered and it cannot be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the occupation or industry indicated by his last job. Nevertheless, the general occupational, industrial and age patterns of the insured population, when compared with those of persons establishing benefit years and of benefit days paid, reveal some significant concentrations that are related to known seasonal shifts in employment.

Part 11. - Benefit Years Established and Terminated.

To assist in the interpretation of the following tables it is well to consider briefly the nature of a benefit year and the conditions under which one is established and terminated. The benefit year is a device for establishing, at any given time, the number of days and daily rate of benefit (if any) to which a claimant is entitled so long as he satisfies the provisions of the Act regarding payment of benefit. A claimant's right to establish any benefit entitlement depends upon proof of recent significant attachment to insured employment and having past contributions signifying more than insignificant earnings in insured employment. Thus, in 1951, to establish a benefit year a claimant had to satisfy the following conditions (called statutory conditions):

That contributions had been paid in respect of him while employed in insurable employment -

- (a) for not less than 180 days during the two years immediately preceding the day on which the benefit year commences; and
- (b) for either not less than 60 days during the 52 weeks, or not less than 45 days during the 26 weeks, immediately preceding the commencement of the benefit year, or during the period since the commencement of the immediately preceding benefit year, if any, whichever period is less.

Entitlement to benefit payments at any time depends, however, upon other circumstances. The first eight days of proven unemployment in any benefit year are not compensated, ("waiting days"); and the first day in any period of proven unemployment is not compensated except that only one such day is excluded in any claim week and benefit is paid for the first day following an interruption of a period of proven unemployment by employment not exceeding three consecutive days in duration.

In addition, to be eligible for benefit the claimant must declare periodically that he is unemployed, capable of and available for work and unable to obtain suitable employment. A claimant is deemed

to be unemployed if he has become separated from his employment, been temporarily laid off, or put on short time; but is not considered unemployed on any day for which a contribution is payable, during any period for which he has received dismissal pay or payment in lieu of notice, or (even though separated from his major employment) if he earns more than an average of two dollars a day in some subsidiary employment.

During a period such as illness or vacation, a claimant may be considered not capable of or not available for employment. Voluntarily leaving the former employment without just cause, discharge on account of his own misconduct, refusal of an offer of suitable employment, or neglecting to avail himself of an opportunity to work at suitable employment, render the claimant subject to disqualification from benefit for a period not exceeding six weeks. Such a period is considered to be voluntary idleness.

Significant attachment to the insured working force is indicated by the claimant's past contribution record. Thus the requirement that at least one hundred and eighty days' contributions must have been recorded within the past two years and at least sixty of these during the past year (or alternatively forty-five during the past six months) or since the commencement of the immediately preceding benefit year. In addition, benefit cannot be paid to any person : while he is an inmate of an institution supported wholly or partly out of public funds, or while he is not residing in Canada (with some exceptions).

The above brief summary of the conditions surrounding the payment of benefit is intended merely as an aid to those intending to interpret and use the following tables and should not be considered exhaustive or strictly accurate (under some circumstances the time periods mentioned can be extended and the Commission is given power to make regulations covering some of the aspects of entitlement to benefit). For a complete and strictly accurate understanding of these conditions reference should be made to the Unemployment Insurance Act, 1940, as amended June 1950 and the regulations passed by Order-in-Council under the authority of that statute.

In 1951 (see Table 1) there were 629,080 benefit years established by 617,719 claimants (606,408 of whom established only one benefit year while 11,311 established two or more benefit years). The total of benefit days authorized in 1951 was 98,272,422 or an average of 156 per benefit year established. On the 590,660 benefit years terminated during 1951, benefit days paid totalled 32,206,955 or an average of 55 per benefit year terminated. (The corresponding average for those terminated by exhaustion was 88 days and for those terminated by lapsing 46 days - see Tables 12 and 13). In general, then, the benefit rights available to claimants in 1951 were more than adequate to meet the demands on them.

Tables 2 to 9 are concerned with the persons who established benefit years and present data on their personal and employment characteristics. In Table 2 those who established benefit years in 1951 are classified by province, sex and whether or not they proved that they had

a dependent within the meaning of the Act. About 59 p.c. of males and 7 p.c. of females were considered to have a dependent and therefore had benefit rights established at the higher scale of benefit rates.

Table 3 provides information regarding the marital status of persons who established benefit years. Of the males establishing benefit years, 35 p.c. were single and 61 p.c. married. For females, percentages in these categories were 45 and 43. About 11 percent of females were either widowed or separated.

The occupational distribution of those who established benefit rights is given in Table 4. The occupation followed in the most recent job held is recorded when the claim is filed and it should be emphasized again that this is not necessarily the usual occupation of an individual. Those who established more than one benefit year in the calendar year are recorded here in the occupation followed in the most recent job held prior to establishing the first benefit year.

Table 5 classifies the persons who established benefit years by daily rate of benefit authorized, sex, dependency status and province. About 30 p.c. of males and 5 p.c. of females with a dependent had benefit rights established at the highest rate (\$3.50), while 87 p.c. of males and 34 p.c. of females with a dependent are accounted for in the two highest rate groups (\$3.05 and \$3.50). At the same time, the two largest groups of females having a dependent are found in the classes \$2.60 (26 p.c.) and \$3.05 (29 p.c.). For those without a dependent about 20 p.c. of males are found in the highest class, \$2.70 and about 88 p.c. in the three top classes as compared to 3 p.c. of females in the highest class and 53 p.c. in the three highest classes. The largest groups of females with no dependent are found in the \$1.70 and \$2.05 rate groups, both with 27 p.c. of the total.

The relatively small percentage of both males and females (with and without dependent) located in the highest rate group is in part explained by the fact that although provision was made on the contribution schedule for a new highest class in July 1950, it was not until July 1951 that the higher rate of contribution resulted in benefit rates of \$3.50 and \$2.70 for those with and without a dependent, respectively (the former maxima were \$3.05 and \$2.40).

In Table 6 persons who established benefit years in 1951 are classified according to the number of benefit days authorized (by 10-day intervals), sex and province. This distribution for males shows a steady decline in the size of the group from the 40-49 day category to and including, the 210-219 day category. Beyond this low point the numbers in the groups steadily increase. For females the decline in the size of successive groups commences at 40-49 days, the smallest class being found at 190-199 days. The maximum authorization is 312 days and this requires five years of uninterrupted contributions immediately preceding the date of the claim. The small number of cases with less than 30 days authorized is made up of individuals with a consistent record of claims, while the comparatively large group having 30-39 days consists in part of those with a heavy claim record and in part of recent entrants to insured employment and "fringe" elements who work intermittently or seasonally in insured jobs.

A distribution of persons who established benefit years in 1951 by age group, sex and province, is given in Table 7. The largest groups of males occur in the two quinquennial groupings 20-24 and 25-29 (comprising 15 p.c. and 14 p.c. respectively of all males) and there is then a progressive reduction in the numbers included in each 5-year group up to age 64. The age group 65 and over includes about 7.9 p.c. of all males establishing benefit rights. When this curve is compared with that for the insured population as a whole some significant differences are apparent (see Table C). For example, in the insured population 9 p.c. of males are under 20 years of age and 6 p.c. of males who established benefit years are in this age group. The group 20-24, on the other hand, contains a higher percentage of males establishing benefit years than of insured males (15 p.c. of those who established benefit rights as against 14 p.c. of covered males). Males 25-29 years of age are represented proportionally to the same extent in the two series (14 p.c.) while in each of the quinquennial groups from age 30 to 59 males are about the same proportion of those establishing benefit years as of the insured population. For the group 60-64 males establishing benefit years are slightly more prevalent than in the insured population (4.8 p.c. as compared with 4.2 p.c.) but males at ages of 65 and over account for 7.0 p.c. of those establishing benefit years and only 3.4 p.c. of insured males.

The age composition of the female insured population is quite different from that of the male, some 69 p.c. of females being under 35 years of age with a heavy concentration in the age groups 16-19 (20 p.c.) 20-24 (23 p.c.) and 25-29 (15 p.c.). This naturally affects the distribution of females establishing benefit years but in general the same pattern of differences described above for males between the age composition of the group that established benefit rights and the population occurs for females. The proportion of females who established benefit years under 20 years of age is considerably lower than in the population while those between 20 and 29 are more heavily concentrated in data on benefit years established. At ages from 30 to 49 there is a higher proportion of females among those establishing benefit rights than in the insured population. Females aged 50 and over comprise only 8 p.c. of insured females so differences in the proportional representation of the quinquennial groups do not involve large numbers. Yet it appears that at ages of 50 and over (compared with 65 and over for males) the proportion of females establishing benefit years tends to be greater than their relative importance in the insured population.

In Table 8 the persons who established benefit years during 1951 are classified by industry, sex and age. The industry recorded in each case is obtained from the nature of business of the most recent employer at the time the initial claim is filed. The contributions recorded in the preceding five years (the basis for calculating duration of benefit entitlement) have, in many cases, been made while the claimant was engaged in other employment. Thus the industry tables (Tables 8 and 9) signify only the industries in which claimants were employed immediately prior to the establishment of their benefit years.

Tables 10-25 are concerned with benefit years terminated in 1951 and therefore contain information on the number of days' benefit paid as well as the number of benefit years terminated. In Table 10 benefit years terminated and the benefit days paid in them are classified by sex and province along with an estimate of the amount of benefit paid in these benefit years. The estimated dollar value of benefit paid is obtained

by sorting the cards by province, sex, and daily rate of benefit and then obtaining a total of benefit days paid at each rate. This is the only means available for obtaining the amount of benefit paid by sex.

Table 11 presents benefit years terminated in 1951 and the benefit days paid in them by sex, dependency status and province. This permits the calculation of an average number of days paid for each category. The average is higher for females than for males and for those without a dependent than for those with a dependent (except for females where the average is the same).

Tables 12 and 13 classify benefit years terminated and benefit days paid by cause of termination and by age and sex of the claimant. The average number of days benefit paid was 55 (52 for males and 62 for females). In the case of males the average number of days paid progressed fairly steadily with age (being 36 for those under 20 and 61 for those 55-59) but increased markedly for those 60 and over (being 73 for those 60-64 and 119 for those 65 and over). In the case of women, however, at all ages of 20 and over the average days paid are significantly higher than for men of the same age and the age group 25-29 (with 66 days against 42 for males of those ages) has a higher average number of days paid than any other group except those 45 and over.

In Tables 14 and 15 benefit years terminated in 1951 are classified by daily rate of benefit, sex and dependency status. The daily rate used in each case is the one obtained at the time the benefit year was established (in the majority of cases this occurred in 1950). The insignificant number of benefit years terminated at the \$3.50 daily rate is due to the fact that (as explained in connection with Table 5) the \$3.50 rate was not operative for benefit purposes until July 1951.

Table 16 gives benefit years terminated by duration of benefit paid, sex, and province. About 16 p.c. of males and 16 p.c. of females drew no benefit; 29 p.c. of males and 25 p.c. of females who drew benefit drew less than 30 days; and 70 p.c. of males and 63 p.c. of females drew less than 75 days.

In Table 17, benefit years terminated are classified by benefit days authorized and each group of days authorized distributed according to number of benefit days paid. This table indicates the extent to which those who established benefit years actually used their entitlements.

Tables 18 and 19 are concerned with benefit years terminated and the benefit days paid in them by age and sex for Canada and the provinces. Average benefit days paid (52 for males and 62 for females) varied considerably by age as already mentioned in connection with Tables 12 and 13 where these data are presented by age and cause of termination.

Tables 20-25 classify benefit years terminated in 1951 and benefit days paid by occupation and industry. As already pointed out with regard to Tables 4, 8 and 9, the occupation and industry taken for each claimant are those pertaining to his most recent job at the time his initial claim is filed. It is not known to what extent the past contributions used in determining his benefit entitlement were paid while in that job.

Table A. - Number of Persons Issued an Unemployment Insurance Book, April 1, 1951,

(1) - The claimants for whom an occupation was specified have been included in the appropriate occupation group. The total claimants as given in this table is less than that in the industry table by 147,430.

* Indicates less than an estimated 100 persons.

- Indicates no one reported in the category.

Table B. - Number of Persons Issued an Unemployment Insurance Book, April 1, 1951,

Classified by Industry, Sex and Province.

Based on 10% Sample

BENEFIT RIGHTS ESTABLISHED UNDER THE SUPPLEMENTARY
BENEFIT PROVISIONS OF THE UNEMPLOYMENT INSURANCE ACT.

January 1 - March 31, 1951.

The supplementary benefit provisions of the Unemployment Insurance Act provide for specified benefit rights, to certain classes of claimants unable to satisfy the minimum contribution requirements for regular benefit, during the winter months. The plan came into operation through an amendment to the Unemployment Insurance Act in February 1950. This report provides statistical material on cases of benefit entitlement and benefit days paid during the period, January 1 - March 31, 1951.

Supplementary benefit is made available during the operative period to the following four classes of claimants, provided they meet all the requirements necessary for the payment of regular benefit except that the contribution requirements are relaxed as specified in each case :

Class 1. - A person whose benefit year has terminated since the 31st day of March immediately preceding the day on which he makes a claim for supplementary benefit.

Class 2. - A person who failed to fulfill the statutory conditions on a claim filed since the preceding 31st day of March if contributions were paid in respect of him for not less than 90 days since that date.

Class 3. - A person who was employed in lumbering and logging other than in the province of British Columbia or in lumbering and logging (except in British Columbia) and any insurable employment for not less than 90 days in any consecutive twelve-month period within the eighteen months preceding the date on which he makes a claim for supplementary benefit.

Class 4. - A person who, for not less than 90 days subsequent to the preceding 31st of March, was employed in an employment which was made insurable in the year preceding the date of claim, or in employment that became insurable in that year and any other insurable employment.

The number of benefit days authorized is calculated as follows :

Class 1. - The same number of days to which he was entitled on his most recently established benefit year.

Class 2. - One-fifth of the number of days for which he has made contribution since the immediately preceding March 31st.

Class 3. - One-fifth of the number of days for which he was employed in lumbering and logging and in any insurable employment during the specified twelve-month period.

Class 4. - One-fifth of the number of days for which he was employed in employment that was made insurable and in other insurable employment, since the immediately preceding March 31st.

In 1951, supplementary benefit was payable during the period January 1 to March 31, (a maximum of 78 days) and the actual days of entitlement were shown regardless of the date of entitlement but in no case exceeding 78 days. Any day of proven unemployment within the thirty days immediately preceding the supplementary benefit period may be substituted for any of the "waiting days" required under the Act.

The daily rate of supplementary benefit is 80 per cent of the regular benefit rate and is calculated on the same basis.

Moneys are provided by Parliament from time to time to reimburse the Unemployment Insurance Fund for benefit payments made to Classes 3 and 4. Provision is also made for Parliament to vote money to reimburse the Fund for any excess in benefit payments to Classes 1 and 2 over revenue from the additional contributions of employers, employees and the Government which was levied for the purpose of paying supplementary benefit to these classes. (The amendment of February 1950 provided for an additional 1 cent each on the daily contributions of employers and employees, to which the Government adds one-fifth in accordance with the contribution provisions of the Act).

Annual Report on Benefit Years Established
and Terminated under
The Unemployment Insurance Act
Calendar Year 1952.

This is the final statistical report dealing with benefit years established and benefit years terminated during the calendar year 1952. The basic material for this report was supplied to the Dominion Bureau of Statistics by the Unemployment Insurance Commission through the Treasury Offices.

Part 1. - The Insured Population.

The insured population changes in size from time to time during the course of a year as individuals enter and leave insured employment seasonally and otherwise. The insured population for which data are presented here (Tables 1, 2 and 3) consists of persons for whom unemployment insurance books or contribution cards were renewed at April 1st and new entrants to insured employment in April 1952. The bulk of such persons were contributing and had books renewed through an employer, but some were claiming unemployment insurance benefit and had their books renewed when they called at a local office. Persons in these two categories at April 1, 1952, numbered about 3,100,000 compared with about 4,400,000 persons to whom books had been issued at some time during the year ending March 31, 1952.

The tables referred to above are based on a 10 percent sample of renewals and new entrants during the month of April, (consisting of those with insurance numbers ending in 4) and therefore the smaller numbers should be used with caution since they are likely to be affected by relatively large sampling variation. In all cases groups containing less than an estimated 100 persons (10 cases in the sample) are indicated by an asterisk so that the sum of the figures appearing under any heading does not necessarily agree with the total shown for that category.

Data on the insured population provide a base to which the magnitudes contained in the body of the report concerning persons establishing benefit years and benefit years terminated can be related. Table 1 which distributes insured persons by industry, age and sex, is directly comparable with Table 10 for persons establishing benefit years and Tables 25 and 26 for benefit years terminated. Similarly Table 2 lines up with Tables 11, 27 and 28 while Table 3 is related to Tables 12, 29 and 30. At the same time, the incidence of benefit years established or benefit days paid derived from these tables should be used with caution. The occupations and industries recorded in Tables 1, 2 and 3 are those in which insured persons were engaged at April 1st, whereas those indicated in Tables 10, 11, 12 and 25-30 relate to the last job held by each claimant at the time of the claim. Thus each must be taken as merely an approximation to the "usual"

employment characteristics of the group covered and it cannot be assumed that a claimant's past contributions (on which his benefit rate and duration depend) were paid while engaged in the occupation or industry indicated by his last job. Nevertheless, the general occupational, industrial and age patterns of the insured population, when compared with those of persons establishing benefit years and of benefit days paid, reveal some significant concentrations that are related to known seasonal shifts in employment.

Part 11. - Benefit Years Established and Terminated.

To assist in the interpretation of the following tables it is well to consider briefly the nature of a benefit year and the conditions under which one is established and terminated. The benefit year is a device for establishing, at any given time, the number of days and daily rate of benefit (if any) to which a claimant is entitled so long as he satisfies the provisions of the Act regarding payment of benefit. A claimant's right to establish any benefit entitlement depends upon proof of recent significant attachment to insured employment and having past contributions signifying more than insignificant earnings in insured employment. Thus, in 1952, to establish a benefit year a claimant had to satisfy the following conditions (called statutory conditions):

That contributions had been paid in respect of him while employed in insurable employment -

- (a) for not less than 180 days during the two years immediately preceding the day on which the benefit year commences; and
- (b) for either not less than 60 days during the 52 weeks, or not less than 45 days during the 26 weeks, immediately preceding the commencement of the benefit year, or during the period since the commencement of the immediately preceding benefit year, if any, whichever period is less.

Entitlement to benefit payments at any time depends, however, upon other circumstances. The first five days of proven unemployment in any benefit year are not compensated, ("waiting days"); and the first day in any period of proven unemployment is not compensated except that only one such day is excluded in any claim week and benefit is paid for the first day following an interruption of a period of proven unemployment by employment not exceeding three consecutive days in duration.

In addition, to be eligible for benefit the claimant must declare periodically that he is unemployed, capable of and available for work and unable to

obtain suitable employment. A claimant is deemed to be unemployed if he has become separated from his employment, been temporarily laid off, or put on short time; but is not considered unemployed on any day for which a contribution is payable, during any period for which he has received dismissal pay or payment in lieu of notice, or (even though separated from his major employment) if he earns more than an average of two dollars a day in some subsidiary employment.

During a period such as illness or vacation, a claimant may be considered not capable of or not available for employment. Voluntarily leaving the former employment without just cause, discharge on account of his own misconduct, refusal of an offer of suitable employment, or neglecting to avail himself of an opportunity to work at suitable employment, render the claimant subject to disqualification from benefit for a period not exceeding six weeks. Such a period is considered to be voluntary idleness.

Significant attachment to the insured working force is indicated by the claimant's past contribution record. Thus the requirement that at least one hundred and eighty days' contributions must have been recorded within the past two years and at least sixty of these during the past year (or alternatively forty-five during the past six months) or since the commencement of the immediately preceding benefit year. In addition, benefit cannot be paid to any person: while he is an inmate of an institution supported wholly or partly out of public funds, or while he is not residing in Canada (with some exceptions).

The above brief summary of the conditions surrounding the payment of benefit is intended merely as an aid to those intending to interpret and use the following tables and should not be considered exhaustive or strictly accurate (under some circumstances the time periods mentioned can be extended and the Commission is given power to make regulations covering some of the aspects of entitlement to benefit). For a complete and strictly accurate understanding of these conditions reference should be made to the Unemployment Insurance Act, 1940, as amended July 1952 and the regulations passed by Order-in-Council under the authority of that statute.

In 1952 (see Table 4) there were 751,098 benefit years established by 731,048 claimants (711,076 of whom established only one benefit year while 19,972 established two or more benefit years). The total of benefit days authorized in 1952 was 110,504,789 or an average of 147 per benefit year established. On the 660,419 benefit years terminated during 1952, benefit days paid totalled 36,311,202 or an average of 55 per benefit year terminated. (The corresponding average for those terminated by exhaustion was 84 days and for those terminated by lapsing 43 days - see Tables 15 and 16). In general, then, the benefit rights available to claimants in 1952 were more than adequate to meet the demands on them.

Tables 5 to 12 are concerned with the persons who established benefit years and present data on their personal and employment characteristics. In

Table 5 those who established benefit years in 1952 are classified by province, sex and whether or not they proved that they had a dependent within the meaning of the Act. About 58 percent of males and 7 percent of females were considered to have a dependent and therefore had benefit rights established at the higher scale of benefit rates.

Table 6 provides information regarding the marital status of persons who established benefit years. Of the males establishing benefit years, 37 percent were single and 59 percent married. For females, percentages in these categories were 41 and 48. About 11 percent of females were either widowed or separated.

Table 7 classifies the persons who established benefit years by daily rate of benefit authorized, dependency status, sex and province. About 31 percent of males and 6 percent of females with a dependent had benefit rights established at the highest rate (\$4.00), while 74 percent of males and 26 percent of females with a dependent are accounted for in the two highest rate groups (\$3.50 and \$4.00). At the same time, the largest group of females having a dependent is found in the \$3.00 class (26 p.c.). For those without a dependent about 22 percent of males are found in the highest class, \$2.85 and about 82 percent in the four top classes as compared to 4 percent of females in the highest class and 34 percent in the four highest classes. The largest group of females with no dependent is concentrated in the \$2.05 to \$2.50 classes.

In Table 8 persons who established benefit years in 1952 are classified according to the number of benefit days authorized (by 10-day intervals), sex and province. This distribution for males shows a steady decline in the size of the group from the 50-59 day category to and including, the 230-239 day category. Beyond this low point the numbers in the groups steadily increase. For females the decline in the size of successive groups commences at 40-49 days, the smallest class being found at 180-189 days. The maximum authorization is 312 days for practical purposes, however, because of the requirement for five waiting days mentioned above, maximum authorization is considered to be 307 days. This requires five years of uninterrupted contributions immediately preceding the date of the claim. The small number of cases with less than 30 days authorized is made up of individuals with a consistent record of claims, while the comparatively large group having 30-39 days consists in part of those with a heavy claim record and in part of recent entrants to insured employment and "fringe" elements who work intermittently or seasonally in insured jobs.

A distribution of persons who established benefit years in 1952 by age group, sex and province, is given in Table 9. The largest groups of males occur in the two quinquennial groupings 20-24 and 25-29 (comprising 16 percent and 15 percent, respectively of all males) and there is then a progressive reduction in the numbers included in each 5-year group. When this curve is compared with that for the insured population as a whole some significant differences are apparent (see Table 1). For example, in the insured population 9 percent of males are

under 20 years of age and 6 percent of males who established benefit years are in this age group. The group 20-24, on the other hand, contains a higher percentage of males establishing benefit years than of insured males (16 percent of those who established benefit rights as against 14 percent of covered males). Males 25-29 years of age are represented almost proportionally to the same extent in the two series while in each of the quinquennial groups from age 30 to 59 males are about the same proportion of those establishing benefit years as of the insured population. For the group 60-64 males establishing benefit years are slightly more prevalent than in the insured population (4.5 percent as compared with 4.2 percent) but males at ages of 65 and over account for 6.4 percent of those establishing benefit years and only 3.4 percent of insured males.

The age composition of the female insured population is quite different from that of the male, some 67 percent of females being under 35 years of age with a heavy concentration in the age groups 16-19 (18 percent) 20-24 (23 percent) and 25-29 (15 percent). This naturally affects the distribution of females establishing benefit years but in general the same pattern of differences described above for males between the age composition of the group that established benefit rights and the population occurs for females. The proportion of females who established benefit years under 20 years of age is considerably lower than in the population while those between 20 and 29 are more heavily concentrated in data on benefit years established. At ages from 30 to 49 there is a higher proportion of females among those establishing benefit rights than in the insured population. Females aged 50 and over comprise only 9 percent of insured females so differences in the proportional representation of the quinquennial groups do not involve large numbers. Yet it appears that at ages of 50 and over (compared with 65 and over for males) the proportion of females establishing benefit years tends to be greater than their relative importance in the insured population.

In Table 10 the persons who established benefit years during 1952 are classified by industry, age and sex. The industry recorded in each case is obtained from the nature of business of the most recent employer at the time the initial claim is filed. The contributions recorded in the preceding five years (the basis for calculating duration of benefit entitlement) have, in many cases, been made while the claimant was engaged in other employment. Thus the industry tables (Tables 10 and 11) signify only the industries in which claimants were employed immediately prior to the establishment of their benefit years.

The occupational distribution of those who established benefit rights is given in Table 12. The occupation followed in the most recent job held is recorded when the claim is filed and it should be emphasized again that this is not necessarily the usual occupation of an individual. Those who established more than one benefit year in the calendar year are recorded here in the occupation followed in the most recent job held prior to establishing the first benefit year.

Tables 13-30 are concerned with benefit years terminated in 1952 and therefore contain information on the number of days' benefit paid as well as the number of benefit years terminated. In Table 13 benefit years terminated and the benefit days paid in them are classified by sex and province along with an

estimate of the amount of benefit paid in these benefit years. The estimated dollar value of benefit paid is obtained by sorting the cards by province, sex and daily rate of benefit and then obtaining a total of benefit days paid at each rate. This is the only means available for obtaining the amount of benefit paid by sex.

Table 14 presents benefit years terminated in 1952 and the benefit days paid in them by sex, dependency status and province. This permits the calculation of an average number of days paid for each category. The average is higher for females than for males and for those with a dependent than for those without a dependent for both sexes.

Tables 15 and 16 classify benefit years terminated and benefit days paid by cause of termination and by age and sex of the claimant. The average number of days benefit paid was 55 (54 for males and 59 for females). In the case of males the average number of days paid progressed fairly steadily with age (being 39 for those under 20 and 61 for those 55-59) but increased markedly for those 60 and over (being 73 for those 60-64 and 115 for those 65 and over). In the case of women, however, at all ages of 20 and over the average days paid are significantly higher than for men of the same age.

Table 17 deals with benefit years terminated by marital status, sex of claimant and province. About 36 percent of males for whom benefit years were terminated were single and 60 percent were married. The same percentage (44 percent) of females were married and single.

Table 18 shows benefit days paid classified by marital status, sex of claimant and province. For total, all status groups females on the average were paid for 59 days as against 54 days for males. This difference is directly related to the larger number of days paid to married females (68) compared to married males (54).

In Tables 19 and 20 benefit years terminated in 1952 are classified by daily rate of benefit, sex and dependency status. The daily rate used in each case is the one obtained at the time the benefit year was established (in the majority of cases this occurred in 1951). The insignificant number of benefit years terminated at the \$2.85 and \$4.00 daily rates is due to the fact that the \$2.85 and \$4.00 rates were not operative for benefit purposes until July 1952.

Table 21 gives benefit years terminated by duration of benefit paid, sex and province. About 13 percent of males and 16 percent of females drew no benefit; 27 percent of males and 27 percent of females who drew benefit drew less than 30 days; and 71 percent of males and 65 percent of females drew less than 75 days.

In Table 22, benefit years terminated are classified by benefit days authorized and each group of days authorized distributed according to number of benefit days paid. This table indicates the extent to which those who established benefit years actually used their entitlements.

Tables 23 and 24 are concerned with benefit years terminated and the benefit days paid in them by age and sex for Canada and the provinces. Average benefit days paid (54 for males and 59 for females) varied considerably by age as already mentioned in connection with Tables 15 and 16 where these data are presented by age and cause of termination.

Tables 25-30 classify benefit years terminated in 1952 and benefit days paid by occupation and industry. As already pointed out with regard to Tables 10, 11 and 12, the occupation and industry taken for each claimant are those pertaining to his most recent job at the time his initial claim is filed. It is not known to what extent the past contributions used in determining his benefit entitlement were paid while in that job.

Table 1. - Number of Persons Issued an Unemployment Insurance Book, April 1, 1952,

(1) - The claimants for whom an occupation was specified have been included in the appropriate occupation group.

Thus the total claimants as given in this table is less than that in the industry table by 183,900.

* Indicates less than an estimated 100 persons.

- Indicates no one reported in the category.

Table 4. - Number of Benefit Years Established, Number of Persons Establishing Benefit Years According to the Number of Benefit Years Established and Benefit Days Authorized During the Calendar Year 1962, Classified by Province and Sex.

APPENDIX

BENEFIT RIGHTS ESTABLISHED UNDER THE SUPPLEMENTARY BENEFIT PROVISIONS OF THE UNEMPLOYMENT INSURANCE ACT.

January 1 - March 31, 1952.

The supplementary benefit provisions of the Unemployment Insurance Act provide for specified benefit rights, to certain classes of claimants unable to satisfy the minimum contribution requirements for regular benefit, during the winter months. The plan came into operation through an amendment to the Unemployment Insurance Act in February 1950. This report provides statistical material on cases of benefit entitlement and benefit days paid during the period, January 1 - March 31, 1952.

Supplementary benefit is made available during the operative period to the following four classes of claimants, provided they meet all the requirements necessary for the payment of regular benefit except that the contribution requirements are relaxed as specified in each case:

- Class 1. - A person whose benefit year has terminated since the 31st day of March immediately preceding the day on which he makes a claim for supplementary benefit.
- Class 2. - A person who failed to fulfill the statutory conditions on a claim filed since the preceding 31st day of March if contributions were paid in respect of him for not less than 90 days since that date.
- Class 3. - No longer operative.
- Class 4. - A person who, for not less than 90 days subsequent to the preceding 31st day of March, was employed in an employment which was made insurable in the year preceding the date of claim, or in employment that became insurable in that year and any other insurable employment.

The number of benefit days authorized is calculated as follows:

- Class 1. - The same number of days to which he was entitled on his most recently established benefit year.
- Class 2. - One-fifth of the number of days for which he has made contribution since the immediately preceding March 31st.
- Class 3. - No longer operative.
- Class 4. - One-fifth of the number of days for which he was employed in employment that was made insurable and in other insurable employment, since the immediately preceding March 31st.

In 1952, supplementary benefit was payable during the period January 1 to March 31, (a maximum of 78 days) and the actual days of entitlement were shown regardless of the date of entitlement but in no case exceeding 78 days. Any day of proven unemployment within the thirty days immediately preceding the supplementary benefit period may be substituted for any of the "waiting days" required under the Act.

The daily rate of supplementary benefit is approximately 80 per cent of the regular benefit rate and is calculated on the same basis.

Moneys are provided by Parliament from time to time to reimburse the Unemployment Insurance Fund for benefit payments made to Classes 3 and 4. Provision is also made for Parliament to vote money to reimburse the Fund for any excess in benefit payments to Classes 1 and 2 over revenue from the additional contributions of employers, employees and the Government which was levied for the purpose of paying supplementary benefit to these classes. (The amendment of February 1950 provided for an additional 1 cent each on the daily contributions of employers and employees, to which the Government adds one-fifth in accordance with the contribution provisions of the Act).
